

TRAFFIC Recommendations on the Proposals to Amend the CITES Appendices at CoP15

	Species	Comment	Recommendation
34	<i>Adenia firingalavensis</i>	<p>CoP15 Prop. 34 [Madagascar]. Inclusion in Appendix II.</p> <p>This widespread and locally common succulent plant species in Madagascar is traded in volumes that do not appear to represent a significant threat to its survival in the wild and hence it does not meet the criteria for listing in CITES Appendix II.</p> <p>Although the species regenerates from seeds and cuttings, growth and recovery of the plants after harvest of vegetative material is slow. Consequently, it is possible that even a modest increase in harvest of this species could compromise populations. It is recommended that the trade in this species be regularly monitored to ensure that trade remains at the current low levels.</p>	REJECT
