ACKNOWLEDGEMENTS

During the course of this project, many individuals contributed their time, expertise, original research and professional advice. Special thanks in this regard are due to the numerous people who provided valuable information through interviews, correspondence and unpublished reports. Special thanks go to Steven Johnson, ITTO, for his assistance in accessing the relevant ITTO reports for this study. This report would not have been possible without the assistance and co-operation of the various statistics and Customs agencies in the study countries and territories, and in particular Ministry of Forestry, Indonesia, and Ministry of Economy, Trade and Industry, Japan, for their assistance in the case study on Indonesia and Japan.

Special thanks also go to Mr Rony Soeriakoesoemah and Ms Sagita Arhidani of the ASEAN Secretariat for their continued support of this basic information transparency issue.

This author is grateful for the assistance and valuable advice of many TRAFFIC colleagues: Steven Broad, Teresa Mulliken, Sabri Zain, Julie Gray, James Compton, Roland Melisch, and Richard Thomas of TRAFFIC International; Xue Yan Liu, Timothy Lam, Sean Lam, Hong Fa Xu, Kahoru Kanari and Akiko Ishihara of TRAFFIC East Asia; Azrina Abdullah, Tong Pei Sin, Noorainie Awang Anak, Zeenith Md Abdullah, Thomas Osborn, Dang Linh Huong of TRAFFIC Southeast Asia and Ani Mardiastuti, formerly of TRAFFIC Southeast Asia; Rob Parry-Jones, Maylynn Engler, Stephanie von Meibom and Claudia De Rosa of TRAFFIC Europe; and Aradhna Mathur and Crawford Allan of TRAFFIC North America. Numerous consultants provided assistance in gathering data for this study, including Eugene Lee, Sastrawan Manullang, Ingrid Roerhorst and Birgit Felgentreu.

In addition, special thanks go to the following individuals for taking the time to review the report, either in part or in whole: James Hewitt, Aradhna Mathur, George White, Ian Gray, Timothy Lam, Eugene Lee, Thomas Osborn, Hugh Speechly, Henry Scheyvens, Steven Johnson and Sam Lawson; their comments made this a much better report.

TRAFFIC's research for this report and the timber trade discrepancy workshop was made possible by funding support from DFID UK and the GTZ REFOP programme in South-east Asia, in particular Mr Hugh Speechly and Mr John Hudson of DFID, and Bernhard von der Heyde and Daniela Goehler of GTZ. This funding support is gratefully acknowledged. The Rufford Maurice Laing Foundation is also gratefully acknowledged for its support to TRAFFIC in the final stages of production of this report.

EXECUTIVE SUMMARY

It is well known that timber trade statistics between trading countries do not match, with some of the discrepancies very significant, for volumes, values, products, and over time (Affre *et al.* 2004; Callister, 1992; Forestry Department Indonesia, 2003; Tachibana and Araya, 2004; TRAFFIC, 2002; Vincent, 2004). One basic common denominator for timber trade in most countries is the authority of a national Customs agency to control cross-border trade. The role of Customs therefore needs to be given particular emphasis and the premise of this study is that illegal logging and illegal timber trade can be further controlled by Customs through changes in requirements for information. This should be reflected by a narrowing of bilateral timber trade statistics discrepancies. This study carried out data analysis to illustrate the extent of discrepancies in international timber trade statistics. It reviewed factors involved in creating discrepancies in international timber trade statistics in general, before narrowing the focus to those linked to Customs protocols and the generation of national statistics records, and assessing the potential for improved control in this area.

This study relies on previous ITTO studies on timber trade statistics and gained new insight into the object of study through interviews with key stakeholders, especially Customs and staff of statistics departments. It focuses on the functions and protocols of Customs and how they relate to statistics generated for selected producer, processing and consumer entities: Indonesia, Malaysia, Singapore, China, Taiwan, Hong Kong, Republic of Korea (South Korea), Japan, the USA, the UK, Italy, France, the Netherlands and Germany. As this study is supported by the Asia FLEG, the Asia Forest Partnership and the ASEAN Senior Officers on Forestry, key tropical timber-producing countries in South-east Asia—Indonesia and Malaysia—were selected for study. In terms of products, the study is confined to primary timber products and selected secondary timber products in trade, that is, those categorized by the Harmonized Commodity Description and Coding System (HS) code for round wood (HS4403), sawn wood (HS4407), veneer (HS4408) and plywood (HS4412), for tropical timber. Data accessed were those for the period 2000–2006. To uncover discrepancies in trade data between the selected countries and territories for these product categories, export data from one country or territory for one year were compared by category with import data for the same year for each of the other study countries and territories. It is from these pairs of data sets (“pairs of records”) that variances were calculated, by subtracting reported import volume from reported export volume, and dividing by export volume to obtain the percentage difference.

Factors involved in generating discrepancies in timber trade statistics between trading partners include, but are not limited to, differences in data reporting systems; units of measurement; conversion factors; codification; and scaling methods. Time lapses between export and import; combined shipment of mixed timber products; transshipment; and indirect trade routes can also cause discrepancies. Furthermore, many countries may have quite substantial discrepancies between sets of statistics published by different government sources and, in turn, between such sources and those used by the Food and Agriculture Organization of the United Nations (FAO) and the International Tropical Timber Organization (ITTO). Of particular interest to this study are factors linked to illegal timber trade that

could lead to discrepancies in international timber trade statistics, for example under-invoicing, mis-specification of products, fraudulent trade data and smuggling—by proxy, significant discrepancies between export and import data for the timber trade could indicate the occurrence of illegal timber trade and, by extension, illegal logging.

Comparing pairs of records between study countries and territories, 2000–2006, revealed that 3.3%, 5%, 4.4% and 5.2% for HS codes 4403, 4407, 4408 and 4412, respectively, manifested variances of less than 5%. Some displayed almost zero discrepancy. For all the four HS categories, for variances of 5% and less, some of the volumes traded bilaterally were very large and yet variances were practically negligible. The number of countries recording these minor differences varies across the board and, at some stage, practically all the 14 countries and territories in this study recorded imported volumes and weights with a negligible discrepancy when compared with those recorded as exported by the trading partner. These findings are important, as they show that it is possible, with the current system for control and monitoring of the timber trade, for import data to validate export records. Nevertheless, the majority of timber trade statistics show large discrepancies. In the light of this, it is clear that review of the timber trade statistics of just one country is not sufficient to measure the total timber trade of that country and its data must be validated and verified against the records of other countries, and not just those of known trading partners.

Looking at factors contributing to timber trade statistics linked especially to Customs procedures and subsequent generation of national statistics records, it was found that use of HS codes, though standardized in theory and in use by nearly all countries in the world, does not itself solve the problem of comparative analysis of trade statistics between countries. In analysing the timber trade statistics from the 14 study countries and territories, discrepancies were found between reported exports and imports reflecting variation in use of these codes. Selection and interpretation of the codes appear to present scope for different records, as does the fact that countries use their own extensions of codes to record products in greater detail than the standardized six-digit codes allow.

The current systems in use for handling international timber trade and the basis for trade statistics compilation in each country or territory in this survey were found to be similar, in that completion of Customs declaration forms (for both exports and imports) is mandatory. In all cases, access to the forms is mainly online and submission principally electronic, to Customs authorities. In general, various documents endorsed by relevant government agencies, together with shipping and business documents, are obliged to be submitted to Customs together with the declaration form. Much of this documentation accompanies an exported shipment to its destination, but the official export declaration form does not, despite being the key official document recording export details with actionable information for enforcement authorities.

There appears to be very little cross-referencing between countries and limited exchange, if any, between agencies in-country regarding statistics declared on export and corresponding import forms. Cross-referencing of export information for a shipment with that supplied on import is sometimes

possible if specific concerns arise, but such verification does not happen routinely. In other words, according to the *status quo*, Customs export information is not verified on import, except in so far as certain accompanying documentation allows. There is no standard designated documentation to use to double-check information in the Customs declaration forms in either exporting or importing countries. Customs export declarations could contain fraudulent, inaccurate or misleading information which, if not detected at export, are by no means guaranteed to be picked up on import, unless protocols for cross-referencing exist. Shipping protocols and documents provide an avenue for falsification of characteristics of an export, likewise business documents, although business importers are likely to go to some lengths to check the accuracy of shipment details.

In conclusion, this study found that factors linked to Customs protocols figure among the several possible factors contributing to discrepancies in international trade statistics. These relate to use of HS codes and, above all, the fact that there is lack of continuity between checks and authorizations made at export and those made on import. One of the reasons for this is that there is no uniformity over which export documents should be used to verify shipment details on import and the most useful such document—the official export declaration form—does not even accompany an exported consignment on its journey. As this document carries key information, which it would be difficult to amend in transit, its transmission to importing countries and territories with relevant timber shipments, and inspection on arrival, could play a part in reducing discrepancies in bilateral trade data. In short, alignment of the type of information required by exporting and importing countries and territories would be an obvious measure to use in the interests of closer control of the timber trade.

Recommendations

Implementation of the recommendations below will require acceptance and adoption through a variety of different political and procedural avenues. Political buy-in could be on a bilateral basis, for example as part of a memorandum of understanding on illegal logging, such as those signed between Indonesia and the UK, China, and Japan, which can then engender changes in Customs procedures. Changes could also occur through regionally agreed Customs protocols, such as Customs co-operation within ASEAN and other relevant fora at the international level, including the East Asia Forest Law Enforcement and Governance (FLEG) committees, ITTO and FAO. The Customs Mutual Assistance Agreement, a bilateral Customs agreement for generic Customs co-operation, could be a useful instrument if combined with other bilateral initiatives on illegal logging. The SAFE Framework of Standards of the World Customs Organization (WCO) has a number of protocols that could adopt some of the recommendations listed below. However, the SAFE standards are only applicable to those WCO countries that agree to them. Further consideration is required to determine the best approach towards the acceptance, adoption and implementation of the recommendations that follow.

- The Customs export declaration form, a legal document, should be one of the documents submitted, acknowledged and providing the main evidence for verification by Customs on importation of timber. Shipping and business documentation should only provide supporting evidence and not be

the main documentation referenced, as is the case at present. The WCO should consider the adoption of this recommendation in their SAFE Framework of Standards. ITTO and FLEG could encourage their members to take up this recommendation.

- Customs import declaration forms should refer to standardized, Customs export-validated documentation. Currently, documents used by authorities to verify exports—for example the invoice, manifest, bill of lading or other documentation with the details required by Customs (e.g. volume, value)—are not validated against changes made later. The WCO should consider this within the context of the SAFE Framework of Standards. ITTO and FLEG initiatives should also encourage their constituency to implement this change in validation procedure for international timber shipments.
- Adequate training should be provided to Customs officials with regard to proper use of HS codes for timber products. Beyond this, Customs in most countries already work closely with relevant agencies with expertise in identification and classification of timber products, such as forestry departments. A review of the mechanisms by each country to reduce bottlenecks, if any, and to ensure effective and efficient verification by those relevant agencies on behalf of Customs would greatly reduce the burden on Customs officials prior to final release of the shipment for export or import. The WCO’s capacity-building strategy and its implementation, in collaboration with ITTO and FAO, could undertake identification and meeting of the training needs of each member country.
- The WCO, in conjunction with its member governments, should work to ensure that the same set of six-digit HS codes is used for timber and timber products traded between any two trading entities and that the HS code used in Customs export declaration forms is verified by importing Customs at the point of entry. It should also strive to ensure standardized treatment of re-exports, whereby importing countries record the country of origin of shipments and not the transit country.
- The capacity-building programmes of the WCO and ITTO should consider including workshops and capacity-building activities aimed at standardizing identification of timber according to HS categories, and measurement techniques for key species and products.
- The option of using prior notification as a mechanism to reduce incidences of illegal timber trade between trading countries and territories should be evaluated. The evaluation should assess whether the mechanism could work, either for timber trade in general, or for specific timber products or even species. ITTO and FAO should commission a detailed project on this and present the results of the study to their membership for consideration and action.
- Governments should ensure stronger and more regular dialogue with each other in order to promote reciprocal policies for any bans or restrictions in place and thereby reduce illegal timber trade in practice. Specifically, complementary policy is needed in order for the Indonesian ban on logs and sawn timber exports to be effective. ITTO, FAO and other inter-governmental agencies and interna-

tional fora, such as FLEG and the Asia Forest Partnership, could all play a role to promote reciprocity of policies.

- Customs bodies should have regular bilateral, regional and global meetings with their counterparts in other countries and territories to review consistent discrepancies in trade statistics and to discuss possible solutions to illegal timber trade. Direct and rapid communications between Customs agencies should be facilitated to promote fast cross-referencing of information for validation of shipments on a real-time basis. The WCO and Customs agencies are well placed to follow up on this recommendation.
- Conversion factors used as standard by ITTO should be verified and updated prior to being adopted by all ITTO member countries. ITTO can provide assistance to its member countries to carry this out.
- While there are standards of measurements used to capture the data for Customs, it would be useful for cross-referencing purposes to include weights as mandatory for all timber shipments. While weights do not provide a standardized measurement, owing to degree of water content, they still provide a useful a double-check on quantity that the WCO and national Customs agencies should use.
- Further studies should be conducted on Free Trade Zones, warehousing for timber commodities, and territorial and political considerations, such as the existence of two Customs systems in one country, to determine the influence and impact of such systems on timber trade statistics discrepancies. ITTO should commission a project on this issue and present the study results to ITTC for its consideration, and adoption of the recommendations.

INTRODUCTION

Annual timber statistical reports published by the International Tropical Timber Organization (ITTO), Food and Agriculture Organization of the United Nations (FAO), United Nations Economic Commission for Europe (UN/ECE) and others show discrepancy between what is recorded by the exporting country when compared with what is recorded as imported by the receiving country. This is the case when comparing between trading countries for primary as well as secondary timber products, such as logs, lumber and plywood and other timber products, and is the case for tropical, coniferous and temperate species.

Vincent (2004), in examining the discrepancies in statistics for sawn wood exported by Romania, 1982–1997, to other European Union (EU) Member States, noted that Romania's discrepancies were large by EU standards in two cases: Romanian exports of coniferous sawn wood, where imports reported by trading partners were on average 20 per cent less than exports reported by Romania; and Romanian imports of non-coniferous sawn wood, where imports reported by Romania were on average half as large again as exports reported by trading partners, especially Sweden and the UK.

Substantial data discrepancies in bilateral timber trade between ITTO member countries have been reported at each International Tropical Timber Council (ITTC) session over the years. Regular ITTO statistical reports (examples ITTCXXXI, XXXIII, XXXV, XXXVI and XXXIX) noted there were obvious and significant errors in one or more data categories and that considerable discrepancy existed between available data sources in many categories for both producing and consuming countries. At the 31st session of the ITTC, in Yokohama in November 2001, the Council adopted Decision 6 (XXXI) on “forest law enforcement in the context of sustainable timber production and trade” which requested the ITTO Secretariat to carry out voluntary case studies on assessing export and import data on tropical timber and timber products to improve the accuracy of ITTO’s market and economic intelligence. Case studies for 10 countries—Bolivia, Brazil, China, Indonesia, Japan, Malaysia, Papua New Guinea, Republic of Congo, the UK and the USA—were completed towards the end of 2004.

A summary report by ITTO of the 10 case studies ennumerated major factors contributing to trade data discrepancies (ITTO, 2005), including errors resulting from compilation of submitted trade statistics; errors resulting from inadequate trade data-collection systems; classification practices; product measures and conversions; transshipments and triangular trade; and illegal activity and trade data. Furthermore, many countries may have quite substantial discrepancies between statistics published by different government sources, on the one hand, and those used by international agencies like FAO and ITTO, on the other. Many agencies and international organizations, including ITTO, have provided funding, training and capacity-building to try and reduce the incidence of international timber trade discrepancies, as well as to improve the accuracy of the statistics.

One of the most important reasons that trade data discrepancies are a concern is because they could be indicators of illegal trade—for example, under-invoicing, mis-specification of products, or

smuggling—and, by extension, illegal logging (Forestry Department Indonesia, 2003; Goetzl, 2005; Johnson, 2002; Tachibana and Araya, 2004).

The premise of this study is that, illegal logging and illegal timber trade can be further controlled by Customs through changes in information requirements, control which should then be reflected in the narrowing of bilateral timber trade statistics discrepancies.

In order to be able to quantify trade better and thereby assess its impact, effort is required to minimize discrepancies in the bilateral data sets. This study concerns such an area of effort common to most countries namely, cross-border timber trade control by Customs. It focuses on the protocols used by Customs and national statistics departments of selected exporting and importing countries and territories, to discern where factors contributing to data discrepancies at this stage of trade may lie, using primary timber products and selected secondary products, e.g. logs, sawn timber, plywood and veneer of tropical species. This area of focus was chosen to complement some of the 10 country case studies mentioned above, which did not cover Customs protocols in depth in assessing trade data and possible illegal timber trade. As this study is supported by the Asia Forest Law Enforcement and Governance (FLEG), the Asia Forest Partnership (AFP), and the Association of Southeast Asian Nations (ASEAN) Senior Officers on Forestry, Indonesia and Malaysia, key tropical timber-producing countries in South-east Asia, were selected for study.

This report provides an overview of factors commonly giving rise to discrepancies in trade statistics and assesses their impact on bilateral statistics for timber trade. It then analyses how discrepancies in statistics vary with type of commodity (logs, sawn timber, veneer and plywood) and what might be learned from this. It describes in generic terms the official procedures necessary for exporting timber and those necessary for importing the same in the study countries, before concluding on how these might give rise to discrepancies in the trade data, including by masking the movements of illegal timber across borders. The final sections discuss the implications of these findings and how procedures could be amended to minimize discrepancies and reduce incidences of illegal timber trade.

The study builds on the recommendations arising from the Asia Customs and Forestry Law Enforcement Workshop: Promoting Co-operation among Customs and Forestry Authorities and Other Relevant Agencies in East Asia to Reduce the Trade of Illegal Wood Products, held 8–30 November 2005, in Cebu, Philippines. The report hopes to assist Customs and other timber trade-regulating agencies in their efforts to improve control of the international timber trade and thus supporting the management, conservation and sustainable development of forests. This study will contribute directly to the implementation of the ASEAN Cebu resolution of November 2006 which was adopted by the ASEAN Ministers of Agriculture and Forestry. This resolution recognizes the importance of strengthening national efforts and regional co-operation for effective forestry and related law enforcement. The project will also contribute to the EU Action Plan for Forest Law Enforcement, Governance and Trade (FLEGT), the East Asia and Pacific FLEG Process and to the work programme on illegal logging and illegal timber trade under the AFP.

METHODOLOGY

The study focuses on the timber-trading countries and territories shown in **Table 1**. These countries were chosen as they comprise the tropical timber-producing countries chosen for study (Indonesia and Malaysia—see **Introduction**) and their main trading partners, trading either directly or indirectly via “processing” locations. In many cases, the “pigeonholing” of a country as processor, re-exporter or even consumer is subjective: China, for example, is a major consumer, but also exports significant quantities of timber to many of the countries in the list above. While it is noted that the EU as a whole

is a key consumer of tropical timber, France, Germany, Italy, the Netherlands and the UK were selected for focus. The project sought also to include data from Papua New Guinea, Viet Nam and Australia, but these did not arrive in workable format in time for use in the study.

Table 1

Exporters and importers of timber products reviewed for this study

Producers	Processors/transit countries/territories	Consumers
Malaysia	Singapore	USA
Indonesia	China Hong Kong Taiwan, POC	UK Netherlands Germany France Italy Rep. of Korea Japan

The official Customs statistics of the study countries and territories are classified according to the Harmonized Commodity Description and Coding System (HS) of the World Customs Organization (WCO), an internationally standardized system of names and numbers for categorizing traded products (see **Box 1**). The statistics considered were solely those under HS codes for “wood in the rough” (HS4403); “wood sawn or chipped lengthwise” (HS4407); “sheets for veneering” (HS4408); and “plywood, veneered panels and similar laminated wood” (HS4412). Official export statistics in these categories for each country or territory in this study were compared with the corresponding official import statistics of all the other countries or territories in the study.

In order to calculate the incidence of discrepancy, for this analysis, each pair of bilateral data sets (export and import) for one year is considered as one pair of records. The analysis took this approach because even when there was no recorded export for a given year from the exporting country, there have been many instances where importing countries have recorded trade from that country in that same year, and *vice versa*. The annual percentages of variance between the data sets were calculated by subtracting reported import volume from reported export volume, dividing the result by reported export volume, and multiplying by 100%. Small volumes and discrepancies—concerning volumes of, for example, less than 100 m³—while considered negligible, were still recorded by this study as a reflection of protocols according to which the data had been captured. Discrepancies noted were those relating to quantity only (not value), thereby avoiding the need to deal with complicating variations owing to variability in exchange rates over time. Selected comparisons using six-, eight- or 10- digit HS codes were used to illustrate the findings.

Box I

The Harmonized Commodity Description and Coding System

The Harmonized Commodity Description and Coding System (HS) was developed and is maintained by the World Customs Organization WCO (formerly the Customs Co-operation Council), an independent, intergovernmental organization based in Brussels, Belgium, with over 170 member countries. The System entered into force in 1988. Over 130 Parties are contracted to the International Convention on the Harmonized Commodity Description and Coding System, the instrument governing the HS. The System is used by more than 200 countries and economies as a basis for their Customs tariffs and for the collection of international trade statistics. The result is that more than 98% of reported international trade is classified in terms of the HS.

HS codes comprise a series of six-digit numerical codes. The first two digits represent the chapter of the commodity: Chapter 44, for example, is for "wood and articles of wood; wood charcoal". There are 96 chapters, themselves organized in 21 sections. The third and fourth digits represent the heading in the chapter: thus, for example, Heading 03 in Chapter 44 denotes "Wood in the rough, whether or not stripped of bark or sapwood, or roughly squared". There are over 1200 headings. Most of the headings are subdivided into 1-dash subheadings which, where necessary, are further subdivided into 2-dash subheadings. The fifth and sixth digits in codes denote the sub-headings: thus the code 4403.10, for example, denotes wood in the rough "treated with paint, stains, creosote or other preservatives". Overall, the HS comprises about 5000 separate groups of goods identified by a six-digit code.

Where over six digits exist, the seventh to 10th, inclusive, represent statistical subdivisions that vary from country to country. Plywood, for example, is reported under 4412.13.000 to 4412.19.900 in Indonesia. Codes up to the same sixth digit, however, should be the same the world over and these codes, therefore, should provide comparability between countries—or harmonization.

Source: WCO, 2008.

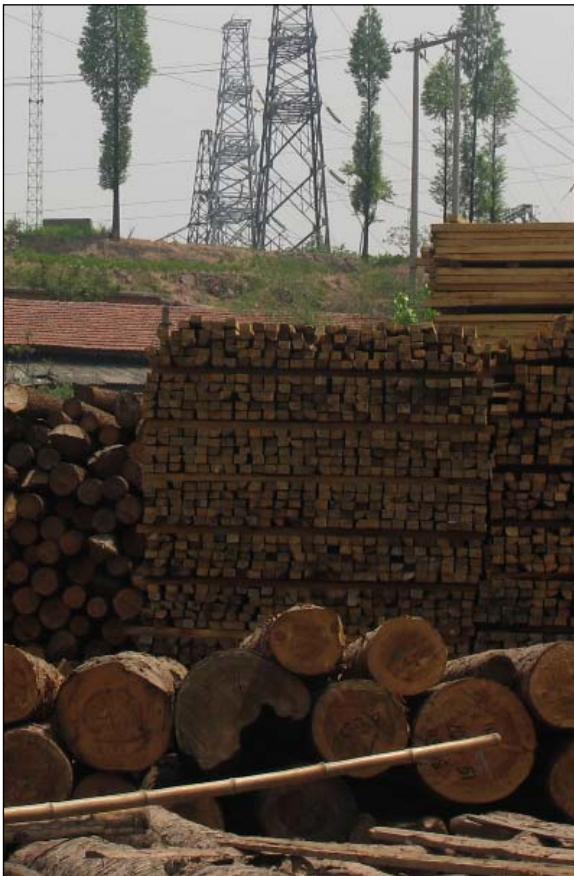

Where possible, to try to reduce sources of error, statistics were gathered direct from authorized statistics departments or Customs. For example, EUROSTAT data were used for EU countries, rather than data from the Joint Forest Sector Questionnaire (a collection of data co-ordinated by FAO ITTO, Eurostat and the UN-ECE Timber Committee), as data in the latter may not match those reported by official sources. Despite the fact that EU Member States are not obliged to report trade between each other, intra-EU data were included in this study, as incidence of reporting for the selected Member States and HS categories was found to be high (see **Annexes 1–4**), and therefore considered sufficiently indicative of actual trade. Clearly, where anomalies in data between Member States exist, it is not possible to say how far these are a function of the fact that reporting is not required in the same way it is required for trade with non-EU countries.

Statistics were collected, where possible, for the years 2000 to 2006—in general, more recent statistics are not universally available—and the analysis used only full sets of data for particular years to compare between trading partners. For Malaysia, electronic data sets were only available for 2004 to 2006 and, for different reasons, only these years' data were used for Singapore. In the case of the latter, data were obtained electronically. As they were codified to an eight-digit level, all eight-digit entries under each of the Headings HS4403, HS4407, HS4408 and HS4412 were summed to arrive at the total quantity for each four-digit category traded with each other project country or territory. As extracting the relevant data was a time-consuming process, only data for the three most recent years, i.e. 2004–2006, were compiled.

Data were converted to cubic metres, if not already reported in that form. In order to ensure uniformity, the conversion factors used for translation of weight to volume were those of ITTO, namely: for non-coniferous tropical logs, $1.37 \text{ m}^3/\text{t}$; for non-coniferous sawn wood, $1.43 \text{ m}^3/\text{t}$; for plywood, $1.54 \text{ m}^3/\text{t}$; and for veneer, $1.33 \text{ m}^3/\text{t}$. The data set for the USA included quantities in metres, in particular for HS4403, which were ignored in the calculations for total volumes per year: it is calculated that the exclusion of products such as fence and telephone poles that are measured in metres will not make a significant difference to the analysis.

In addition to trade data collected for this study, information was gathered on the official procedures and processes required for export and import in each of the study countries and territories, including information regarding the link between these processes and the generation of statistics by national statistics departments. Export and import policies and regulations, for example log export bans or significant tariffs and duties, were noted as far as possible, in case such factors could provide an explanation of changes in statistics or discrepancies.

Other studies related to statistical discrepancies, including studies commissioned by ITTO documenting Customs procedures and processes for recording statistical data, such as Tachibana and Araya (2004) for Japan; Forestry Department Indonesia (2003) for Indonesia; Goetzl and Wood Resources International (2003) for the USA; Dai (2003) for China; Saunders and Brack (2003) for the UK; Bun (2004) for Papua New Guinea; and Mohd Neguib *et al.* (2003) for Malaysia, were drawn on for the current study.

RESULTS

Major factors influencing discrepancies in trade data statistics

The following factors thought to influence statistical discrepancies between trading countries were derived from the ITTO-sponsored studies (see **Methods**) to assess export and import data on tropical timber and timber products.

Errors resulting from inadequate trade data-collection systems and data entry errors

Statistics departments collect data via Customs declaration forms, which are standard documents used by all member countries of the WCO. The level of sophistication of data-collection, compilation and reporting systems of Customs agencies varies between countries (ITTO, 2005). Some countries have sophisticated systems for recording and tracking shipments electronically, for example, the USA (Automated Commercial System, ACS); Japan (Nippon Automated Cargo Clearance System, NACCS); the UK (Customs Handling of Import and Export Freight, CHIEF); and the EU, while others, for example Papua New Guinea, are much more dependent on manual, paper-based filing. The type of information collected also varies. Discrepancies clearly occur as a result of incomplete or inaccurate data-collection.

Data entry errors—and discrepancies caused as a result of them—should be much reduced, relative to the pre-computerized age. In developed countries, including Singapore and to a large extent Malaysia, data entry errors should occur only at the point of entering original data into the computer, as thereafter electronic transfer between agencies is used. In Indonesia, prior to 2004, Customs declaration forms were filled in by hand and there was the possibility of data entry errors when the data were transferred manually from Customs records to *Badan Pusat Statistik* (BPS), the Central Bureau of Statistics. A small proportion of export points in Indonesia, in the more remote provinces, still do not have computerized access to the Electronic Data Interchange Network for submission of export declaration data in electronic format. However, data entry errors in Indonesia should now be minimal, in spite of the large volumes exported, although some supporting documents still have to be submitted to the Customs office manually (Forestry Department Indonesia, 2003).

The US Census Bureau has an automated electronic data exchange system with set parameters for generally acceptable ranges in variables such as weight, volume and per-unit values. Entry of data outside the accepted range is returned to the filer for correction or re-verification (Goetzl and Wood Resources International, 2003). However, entry errors are still considered the most common cause of data discrepancies in the USA (Goetzl and Wood Resources International, 2003). Errors could involve missing or incorrect classification codes and/or incorrect quantities or shipping weights. The US Census studies indicate that these errors account for eight per cent of all import transactions containing one or more reporting errors (Goetzl and Wood Resources International, 2003). The entries are made by some 2800 Customs agents, brokers, freight forwarders and others who use the computerized system for entry, but even with one of the most automated Customs systems in the world, the USA still

estimates the error rate in recording US exports to average at least 17% (Goetzl and Wood Resources International, 2003).

Time of trade

Change in fiscal year: This is not a factor in discrepancies for this study; however, it could have been a contributing factor for discrepancies in relation to trade with Indonesia prior to 2000, when its fiscal year ran from April to March: in general, fiscal years follow calendar years (Forestry Department Indonesia, 2003).

Time lag between export and import: The time between export and arrival, when straddling a change in fiscal year, can give rise to discrepancies. (It can take up to four weeks for a ship to arrive at its destination.) For example, the fastest journey time for a ship to Japan from Indonesia is around eight to 10 days, and loading and unloading can add a few more days. Issuing of the import permit could take up to another 20 days after submission of all documentation, including the Customs import declaration form. If such time lags straddle a fiscal year, data for shipments will be recorded in different years by trading partners. Tachibana and Araya (2004) estimated that upwards of 10% of discrepancies a year could occur as a result of this factor, while the US Census Bureau believes that this factor could account for between 0.5% and 1.5% of discrepancies, by import value (Goetzl and Wood Resources International, 2003).

Product measures and conversion

Units of wood products and conversion factors: In general, there is a range of values for conversion factors, owing, for example, to differing technological conditions (Thivolle-Cazat, 2008). Indonesia uses different conversion factors for weight to volume than those of ITTO and those of Japan. Japan also has conversion factors for particular species and for degrees of water content in the timber. The factors used by Indonesia for round wood and sawn wood are lower than those applied by ITTO. For both products, the factors used to convert one cubic metre of timber products to tonnes are 0.65 and 0.60, respectively, while ITTO uses 0.75 and 0.70. This results in a volumetric difference of approximately 13% for round wood and 14% for sawn wood. For plywood, Indonesia uses a factor of 0.70, while ITTO uses 0.65, which results in a volumetric difference of around eight per cent.

Other conversion calculations exist that can also lead to discrepancies: in Malaysia, efficiency in processing logs to sawn timber was about 67% and 57% for logs to plywood (Thai, 1995, cited in Hashim, 1998), while Roda (2005) in his thesis on tropical forestry suggested that 1.7m³ and 2.1m³ of logs were required on average to produce a cubic metre of sawn wood and plywood, respectively. Japanese import statistics for 2007 indicate that some composite plywood products from Indonesia and Malaysia have a volume:weight ratio of about 1.9m³:1 t and 1.5m³:1 t, respectively. The corresponding ratio for Japan's supplies from China is 2m³:1 t. China's import statistics, however, indicate that China's imports of plywood from the same two countries in 2005 had a volume per unit weight ratio

of 1.3m³:1 t and 1.4m³:1 t, respectively, while imports into the EU from the two countries were calculated differently again (J. Hewitt, *in litt.*, 11 October 2008).

It is evident from these examples that discrepancies in trade statistics arise from the conversion factors used to translate between the differing units of measurement used. Declaring original measurements would be preferable to declaring conversions. Capturing the actual weight of shipments would be helpful for double-checking shipment volumes, as weights remain relatively stable, although moisture content may vary slightly during transportation.

Difference in log scaling methods: Scaling is the method used to measure logs in order to calculate their volume, and hence price. Methods of scaling may differ from one country to the next, but this may not give rise to much discrepancy if business contracts specify which country's measurements are to be used, as is the case for timber contracts with Chinese companies (Dai, 2003) and measurements may only be slightly different, of the order of a few decimal points, as a result of rounding.

Product valuation

Exporters declare the price of timber exported Free on Board (FOB) in Customs export declaration forms. In importing countries, the importer declares the Cost, Insurance and Freight (CIF) value. The difference between FOB value and CIF value should equal the cost of insurance and transportation but this difference, if not accounted for, could generate discrepancies.

Classification practices

There is, in general, little or no information available within Customs data on species in timber trade, as this type of data is not typically specified within HS codes.

Combined shipment of mixed products: A single export declaration form can be used for shipments including timber covered by more than one HS code. This provides scope for discrepancies in data, as only thorough checking of the entire shipment could verify all HS codes that applied. Mixed shipments have been noted as a source of timber trade discrepancy in Papua New Guinea (Bun, 2004).

Different HS code classification: As explained in **Box 1**, six-digit HS codes provide a means for elimination of discrepancies in recording the type of commodity in international trade, as all Contracting Parties to the International Convention on the Harmonized Commodity Description and Coding System, which implements the HS, should use the same set of HS codes up to six digits. Nevertheless, there is scope for discrepancy to occur when using this system and illustrations of how this may happen are given below.

- i) Discrepancies can arise because trading partners do not use the same set of six-digit HS codes, even though they are meant to do so. Countries may select only those HS codes which they think

will be relevant to their national trade, i.e. for the goods in which they trade, or perhaps which have most relevance to their economy. Alternatively, there may be a time lag between the issuing of revised codes by the WCO and the uptake of these same codes by national governments, leading to staggered implementation of the codes among countries using the HS system and inevitable subsequent discrepancies.

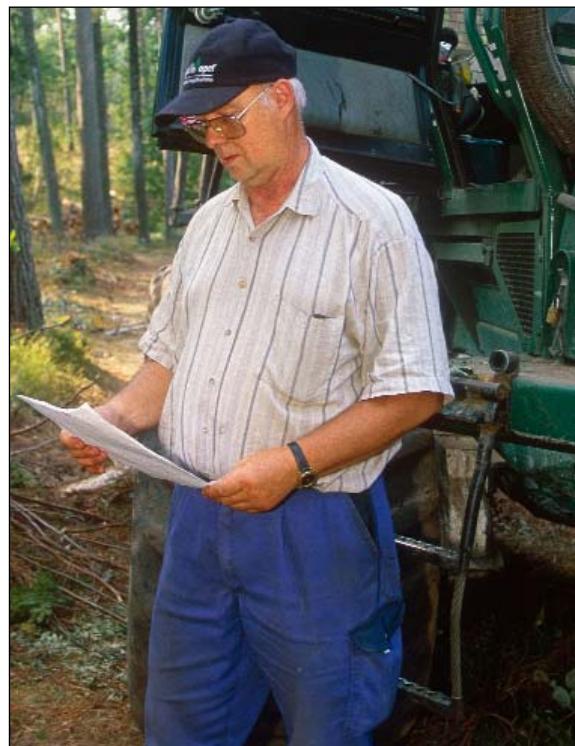

- ii) Discrepancies in six-digit HS codes may arise at the point of code selection. Although these codes are standardized, interpretation of the HS descriptions for each code is subjective. Thus, an agent in one country may choose to categorize a roughly trimmed log under HS4403 (“Wood in the rough...”), while an agent in another might class it under HS4404 under (“...wooden sticks, roughly trimmed...”), again providing a source of discrepancy in data between trading partners.
- iii) When coding extends beyond six digits, i.e. uses digits seven to 10 reserved for national designation, this is in itself a source of discrepancy in international trade statistics.

The US Census Bureau found that the most common misclassification errors for tropical wood products occurred at the eight- and 10-digit HS levels and not at six-digit levels (Goetzl and Wood Resources International, 2003). Providing statistics for higher level codes would help identify anomalies, as well as information on the product mix of a reporting country’s worldwide imports or exports (Bun, 2004; Saunders and Brack, 2003; Tachibana and Araya, 2004).

Trade routing

Triangular trade is trade between three countries, where the final destination may not be stated in the original export document, or the final destination may not have recorded the country of origin but rather the intermediate country. For example, timber trade from Bolivia to the USA routes via Chile or Brazil and is reported to be poorly tracked, hence giving rise to data discrepancies (Goetzl and Wood Resources International, 2003).

Transshipment is transfer from one ship or other form of transport to another, at an intermediate location for onward travel. Data for Indonesia and Malaysia show significant transshipment of timber via Singapore to other countries for the years 2004–2006 (**Annex 1, 2, 3 and 4** for HS4403, 4407, 4408 and 4412, respectively).

Checking paperwork for a timber shipment

Credit: Edward Parker/WWF-Canon

Like triangular trade, transshipment can lead to data discrepancies if it means that there is incorrect specification of the country of origin or destination.

A further possible source of discrepancy in trade data is created when trade to or from a location is subsumed within the statistics of another country or territory. For example, US trade statistics include figures for the foreign trade of Puerto Rico and the US Virgin Islands (Goetzl and Wood Resources International, 2003). This would not have a significant impact on trade statistics under examination in this report, as volumes of tropical wood imported into Puerto Rico and the US Virgin Islands are relatively small. This same issue does not appear to occur between Hong Kong and China, as observed during this study as, while Hong Kong and China are one country, there are two different systems in place with separate Customs for each.

Free Trade Zones (FTZs) and warehousing

FTZs are areas of a country where some trade barriers that normally apply are lifted to stimulate business. In FTZs, countries allow duty-free treatment of commodities that will be re-exported, for example, but not enough is known about the treatment of commodities in FTZs to determine their influence on timber trade statistics discrepancies at present.

Illegal activities and trade data

Under-invoicing: Under-invoicing, or the intentional under-reporting of the amounts imported or exported, can be used to evade or reduce tariff and non-tariff barriers and related costs. It could also be used to conceal timber that has been harvested illegally. This problem could result in discrepancies in bilateral trade statistics. Comparing FOB and CIF values per unit of physical measure (e.g. weight or volume) could shed light on mismatches which are suspected to reflect under-invoicing.

Mis-specification of product types, species or characteristics and grade: There is economic incentive to misinform and mis-specify products for export (Forestry Department Indonesia, 2003; Saunders and Brack, 2004). For example, according to Forestry Department Indonesia (2003), exports of wood products consisting of veneer, moulding, processed wood and finished products from Indonesia are subject to a tax of 15% of the intrinsic value, in line with the *Regulation of the Ministry of Finance No. 92/KMK/2005*, while plywood has no export tax levied. As Indonesian law stipulates that Customs can only inspect a shipment in cases of intelligence concerning Customs fraud, and only in very specific conditions; there is little chance that such mis-specification will be detected at the point of export. At export, Indonesian Customs carry out examination of the *Pemberitahuan Eksport Barang* (PEB), the Indonesian export declaration form, and other business and shipping documentation, but as there is no physical inspection of the shipment, if all documentation tallies, the shipment goes through. If, on import, for example to Japan, such fraudulently declared shipments are physically checked and documented according to the actual contents, as opposed to the invoicing, this will cause discrepancies in the trade data.

Saunders and Brack (2003) and Goetzl and Wood Resources International (2003) refer to differing duties applying to different products on import, that could similarly cause discrepancies between different sets of data, as Customs staff cannot easily recognize slight deviations from accurate product descriptions. Saunders and Brack (2003) note that sawn timber, veneer and plywood products imported into the UK could incur duties: imports of sawn mahogany timber attract a 2.5% duty, HS440791 “Other” hardwoods attract 2%, while non-coniferous wood under HS440710 is duty-free. Similarly, for HS4412 (plywood), a veneer with a listed tropical hardwood species on the ply is charged 10% duty, but if an outer layer of another non-tropical, non-coniferous wood is reported, the duty is lower, at six per cent, and if the cargo is recoded as veneer sheets for ply under category HS4408, duty ranges from 0–6%, depending on the species. Goetzl and Wood Resources International (2003) report that most tropical plywood is subjected to an eight per cent duty in the USA. The main levels of classification affected by attempts to evade duty would be the six- or eight-digit HS codes. Therefore, at the higher four- to six-digit levels, mis-classification to avoid payment of duties should not be a significant factor influencing discrepancies in trade data statistics.

Smuggling: This is a problem for most countries, especially when there are strict policies on trade and/or where taxes are applied on export and/or import. Smuggling occurs when there are regulations that can be used to define and curb such practices. In the case of many importing countries, their regulatory framework may accept timber exported illegally if the smugglers are able to adhere to the procedures for import. For example, a shipment may be exported from a country such as Indonesia illegally and subsequently presented for import into Japan. Japanese Customs authorities will inspect the shipment against invoices, bills of lading and tally sheets and, as long as all valid Japanese taxes are paid and Japanese laws and regulations are fulfilled, the shipment can enter Japan. To illustrate with an example from another importer from Indonesia, Malaysia, a study on the CITES-listed genus ramin *Gonystylus* spp. reported that there were significant discrepancies in trade data for the trade between Indonesia and Malaysia (Lim *et al.*, 2004). It was found that Malaysian laws and procedures for import of timber did not recognize a log export ban by Indonesia and thus Malaysia did not have any provisions to stop such log imports, even though they derived from timber smuggled across the border. Malaysia was only able to provide complementary control when an administrative arrangement by the ministry in charge of timber trade in Malaysia stopped such imports in 2002. Similarly, the EU is not able to stop imports unauthorized by the country of origin, except when the species is CITES-listed (Affre *et al.*, 2004). This situation inevitably creates discrepancies in trade data, as the exporting country will have no record of smuggled shipments documented as imported by the destination authorities.

Discrepancies linked to Customs protocols

As the last section showed, discrepancies are known to occur in international timber trade statistics. The purpose of this analysis is not simply to highlight further the existence of discrepancies, but to identify which discrepancies are likely to be a function of certain Customs protocols and, by inference, to identify opportunities for illegal timber trade to be revealed as part of Customs activities and the process of statistics generation. In this way, it is hoped that incidence of illegal timber trade, and hence of illegally logged timber, can be reduced.

First, however, the following section illustrates the nature and scale of the data discrepancies for each of the HS categories reviewed by the study—“wood in the rough” (HS4403); “wood sawn or chipped lengthwise” (HS4407); “sheets for veneering” (HS4408); and “plywood, veneered panels and similar laminated wood” (HS4412).

Data discrepancies in timber trade by product category

Annexes 1, 2, 3 and 4 show that the discrepancies between export and import statistics for products under codes HS4403, 4407, 4408 and 4412 for countries and territories included in this study varied in

Table 2

Comparison of pairs of records for trade in HS4403, HS4407, HS4408 and HS4412 between study countries and territories, showing a range variances for 2000–2006

Variances	Number of pairs of records			
	HS4403	HS4407	HS4408	HS4412
Variance of \leq 5%	36 (3.4%)	54 (5%)	47 (4.4%)	56 (5.2%)
Variance of >5% and \leq 10%	31 (2.9%)	52 (4.8%)	43 (4%)	28 (2.6%)
Variance of >10% and \leq 25%	87 (8.1%)	119 (11.1%)	130 (12.3%)	81 (7.5%)
Variance of >25% and \leq 50%	112 (10.4%)	148 (13.8%)	149 (14.1%)	98 (9.1%)

Total	1074	1074	1060	1074

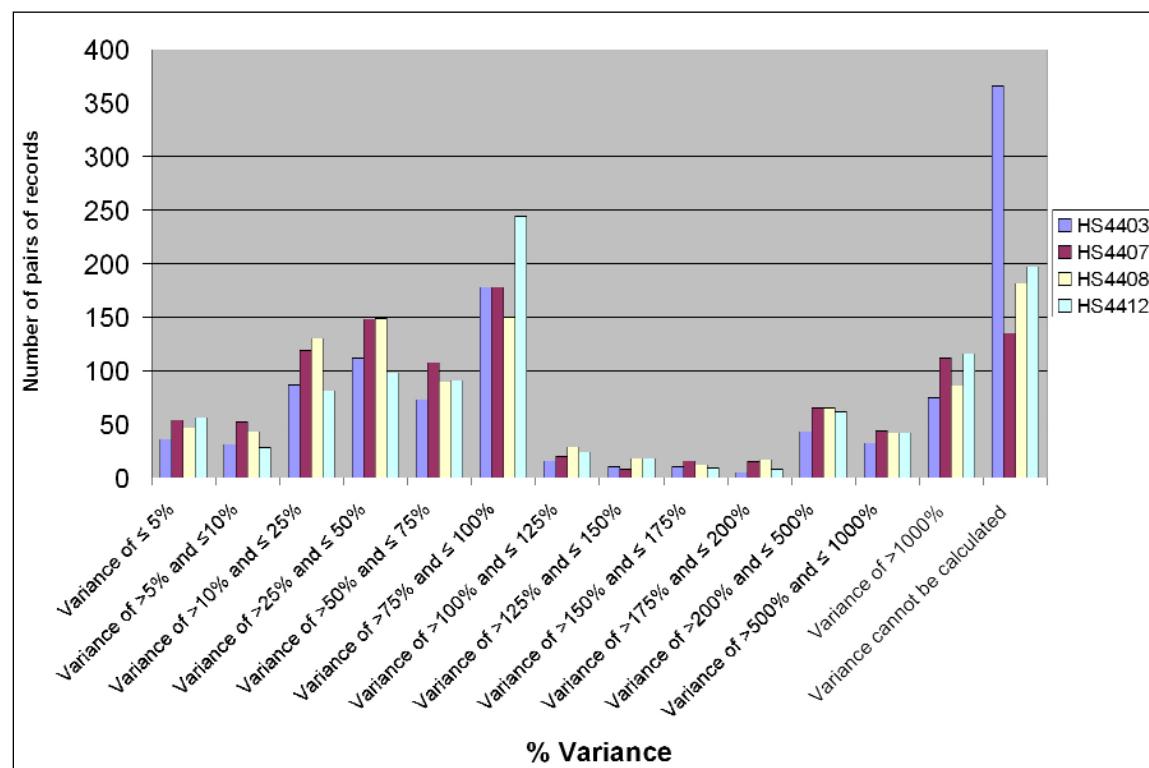

terms of volume, with location, and over time. As stated in **Methodology**, in order to calculate the incidence of discrepancy, each pair of bilateral data sets (export and import) for one year is considered as one pair of records. The analysis took this approach because even when there was no recorded export for a given year from the exporting country, there have been many instances where importing countries have recorded trade from that country in that same year, and *vice versa*. A negative variance percentage means that import quantities were larger than exports.

The analysis showed that major producers' export figures, when compared with figures of their main importers, showed obvious discrepancies in the majority of cases. Trade between processing countries and countries importing timber therefrom also showed discrepancies. Data for consumer countries exporting to other consumer countries showed discrepancies, in spite of the sophistication and automation of their electronic data entry systems.

Table 2 and **Figure 1** show some interesting discrepancy variances between the reported export and import data and, as can be seen from **Figure 1**, there are three obvious clusters of discrepancy ranges. Further studies of the actual individual records and documentation between the trading countries may highlight a reason for this clustering, but this is beyond the scope of this project.

Figure 1

Comparison of pairs of records for trade in HS4403, HS4407, HS4408 and HS4412 between study countries and territories, showing a range variances for 2000–2006

There are some pairs of records for all four HS products categories where the percentage variance is less than 10% and, in 3.3%, 5%, 4.4% and 5.2% of cases, respectively, for trade in categories HS4403, 4407, 4408 and 4412 where it is even below 5% (**Table 2**). The data also show a class of pairs of records for which the variance cannot be calculated because at least one of the trading countries or entities has a record of zero exports or imports. Some of the findings by HS category are summarized in brief below.

- In the case of **HS4403**, there were 198 pairs of records (18.4% of all pairs of records) where only one country reported trade (**Annex 1**). These records are within the category where variance cannot be calculated (see **Table 2**). There were 187 pairs of records (17.4% of all pairs of records) where there were “0” records of exports, but where imports were recorded as originating from those trading entities recording zero exports. Examples of significant data discrepancies of this kind were, in 2006, France “0”, Germany 380 419 m³; Netherlands “0”, Germany 128 492 m³; and Indonesia “0”, South Korea 46 284 m³; and, in 2005, Indonesia “0”, China 49 897 m³ (see **Annex 1**).
- For **HS4407** there were 63 pairs of records (5.9% of all pairs of records) where only one country reported trade (**Annex 2**). There were 72 pairs of records (6.7% of all pairs of records) where there were “0” exports, but imports were recorded originating from those trading entities recording zero exports. Examples of some significant discrepancies were, in 2002, Netherlands “0”, South Korea 83 275m³; in 2005, Indonesia “0”, USA 24 168 m³ and Indonesia “0”, Hong Kong 35 245 m³; and in 2006, Indonesia “0”, Hong Kong 26 813 m³ (see **Annex 2**).
- **HS4408** had 109 pairs of records (10.1% of all pairs of records) where only one country reported trade (**Annex 3**). There were 73 pairs of records (6.8% of all pairs of records) where there were “0” records of exports, but imports were recorded originating from those trading entities recording zero exports. Examples of significant data discrepancies were, in 2005, UK “0”, Taiwan 274 275 kg; Indonesia “0”, Hong Kong 70 117 kg, in 2006, Netherlands “0”, South Korea 150 922 kg; Taiwan “0”, Germany 110 800 kg; Malaysia “0”, Italy 11 800 kg; Netherlands “0”, Japan 11 773 kg; and Indonesia “0”, Taiwan 776 453 kg (see **Annex 3**).
- **HS4412** had 105 pairs of records (9.8% of all pairs of records) where only one country reported trade (**Annex 4**). There were 92 pairs of records (8.6% of all pairs of records) where there were “0” records of exports, but imports were recorded originating from those trading entities recording zero exports. Examples of significant data discrepancies were, in 2006, Italy “0”, Germany 58 161 m³; France “0”, Germany 41 085 m³; in 2005, Italy “0”, Singapore 34 807 m³; Hong Kong “0”, Singapore 25 046 m³; Netherlands “0”, Germany 14 792 m³ (see **Annex 4**).
- For **HS4403** there were 36 pairs of records (3.4% of all records), from nine exporting entities to 13 trading partners, where some volumes traded were very large and yet variances were practically negligible. Fifteen out of 36 pairs of records with a variance of 5% and less were recorded after the year 2005. The number of trading entities recording these minor differences was varied across the

board. Of note is that three pairs of records had less than 0.5% variance: between Malaysia and Taiwan (2005); France and Taiwan (2002); and the UK and Germany (2000).

- **HS4407** had 54 pairs of records (5% of all pairs of records), from 13 exporting countries to 14 trading partners, with a variance of 5% and less. Nineteen out of 54 pairs of records with a variance of 5% and less were recorded after 2005. In all, seven pairs of records had variances of less than 0.5%: Malaysia and UK (2005); Germany and South Korea (2002); Taiwan and Singapore (2005); USA and UK (2002); Germany and Taiwan (2005); Italy and South Korea (2004); and France and the Netherlands (2000).
- **HS4408** had 47 pairs of records (4.4% of all records) from 12 exporters to 13 importers with a variance of 5% and less. In particular, there was one case with literally “0” discrepancy—between Taiwan’s exports and South Korea’s imports—for this product category, in 2002. Twelve out of 47 pairs of records with a variance of 5% and less were recorded after the year 2005. The number of trading entities recording these minor differences was varied across the board. Of note is that seven pairs of records had less than 0.5% variance, although six of the pairs of records were from the years 2000 to 2003, and the only recent match was in 2006, between the UK and Italy, where the difference was only 100 kg for a trade of 69 200 kg exported by the UK.
- **HS4412** had 56 pairs of records (5.2% of all pairs of records) from 10 exporting entities to 13 trading partners with variance of 5% and less. Fourteen out of 56 pairs of records with variance of 5% and less were after the year 2005. Of note is that five pairs of records had less than 0.5% variance, although two each of the pairs of records were for the years 2001 and 2004, and the only recent match was in 2006, between China and Taiwan where the difference was only 2240 m³ for a trade of 451 859 m³, exported by China.

The number of trading entities recording these minor differences for all the four HS categories is varied across the board and at some stage, practically all the study countries and territories recorded imported volumes and weights which differed only negligibly from those recorded as exported.

Meranti *Shorea* spp. harvest in Malaysia

Credit: Edward Parker/WWF-Canon

For HS4403, 517 pairs of records (or 48% of total pairs of records) had a percentage variance of 100% or less. For HS4407, the number of pairs was 659 (or 61% of all pairs of records collected), for HS4408, 609 (or 57.5% of all pairs of records collected) and for HS4412, 598 (or 55.7% of all pairs of records collected). It appears that the number of pairs of records increases with percentage variance, up to 100% variance, for all the four categories of HS studies (**Table 2** and **Figure 1**).

HS4403, HS4407, HS4408 and HS4412 had fewer pairs of records with 100–200% variance than with 0–100% variance. HS4403 had only 41 pairs of records in this bracket and HS4407 only 59 pairs, while HS4408 and HS4412 had only 67 and 59 pairs, respectively (**Table 2** and **Figure 1**). From the data sets available it is not possible to deduce any reason for this difference between the two variance categories.

Case study between Indonesia and Japan

This case study is provided to illustrate the generic analysis above and is based on Chen and Ishihara (in prep.) and additional analysis carried out in the course of this study. Indonesia is a unique case among the countries in this study, as it has an national ban on log and sawn timber exports.

HS 4403—wood in the rough, whether or not stripped of bark or sapwood, or roughly squared: Reported log exports from Indonesia declined dramatically from 2002 because the Indonesian Government imposed a log export ban in October 2001 (ITTO, 2001). The ban appears to be working in relation to trade to Japan, since the volume reported, by both Indonesia and Japan (but also for some other trading entities, see **Annex 1**), are now insignificant (**Table 3**). Tachibana and Araya (2004) show that round wood (log) data appeared to tally between Japan and Indonesia, with only 110 m³ reported as imported from Indonesia in 2003 after the ban.

Credit: Jkkie Jonkman/WWF-Canon

Logs near a small riverside village inside Sebangau National Park, Kalimantan, Indonesia

The only country with a reciprocal policy to enforce the Indonesian ban is Malaysia, which has instituted a ban on imports of HS4403 from Indonesia (only). Indonesia recorded exports of 407 m³, 207 m³ and 0 m³ for 2004, 2005 and 2006 respectively, and Malaysia recorded imports of 3585 m³, 4369 m³ and 1643 m³ for the same years (**Annex 1**). By contrast, trade appears to have continued to Singapore.

Indonesia reported the export of 1 m³, 25 m³ and 42 m³ to Singapore for the years 2004, 2005 and 2006, respectively, while Singapore reported the import of 28 571 m³, 35 836 m³, and 13 647 m³ for the same years (**Annex 1**). A firm policy on export bans can show results when an importing country respects such bans, as appears to be the case for Japan and Malaysia in respect of Indonesia's log export ban. However, depending on industry self-regulation appears not be sufficient in general, as seen from the import data for Indonesian logs for many of Indonesia's other trading partners in this study (see **Annex 1**).

Table 3

A comparison of the export volumes for HS4403 logs/lumber as reported by Indonesia and its importing partner Japan from 2000 to 2006 (m³)

Year	Export (m3)	Import (m3)	Difference	% Variance
	Indonesia	Japan		
2000	30 776	46 330	-15 554	-51

HS4407—wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding six mm: From 2000 to 2004, the discrepancy between what was reported as exported from Indonesia for HS4407 and what was reported received in Japan was tremendous, around 700%, or around 300 000 m³ a year, with Indonesia recording the lower volume (**Table 4**). The discrepancy was even greater after 2004, although the volumes were lower. Presumably, the lower volume may have been a result of the Indonesia ban on export of sawn timber under HS4407, introduced 24 September 2004: when looking at data for trade of sawn timber from Indonesia (in **Annex 2**), the country's export data show a greatly reduced export volume, but importing countries continue to receive sawn timber in excess of what was recorded as exported by Indonesia. Presumably the Indonesian exports are legal as they pass through Indonesian Customs.

HS4408—sheets for veneering: Japan reported significantly more imports in category HS4408 from Indonesia, 2000–2006, than the average of 1000 m³ or so Indonesia reported exporting each year (**Table 5**), apart from in 2004.

HS4412—plywood, veneered panels and similar laminated wood: Indonesia was one of the largest producers and exporters of plywood (HS4412) in the world. The annual average export volume, 2000–2006, was over 1.7 million m³ (**Table 6**), but on average Japan recorded imports of over 2.3 million m³ of plywood from Indonesia, amounting to a discrepancy averaging around 34%.

Different HS code classification used by exporting and importing countries

As mentioned earlier, HS classification is standardized by the WCO for use by all WCO member nations to the six digit level (see **Box 1**). However, as seen in the HS codes for selected countries and territories in this study (**Annexes 6, 7, 8, 9 and 10**), and as described in *Classification practices*, these can still give rise to discrepancies in trade records and instances of the same found during analysis for this study are noted below.

- Trading partners do not use the same set of six-digit HS codes, although they should. To illustrate with an example from two of the study countries for this report, Indonesia has the HS code 4407.24 in its list of six-digit codes under the sub-heading 4407, whereas Japan does not. Conversely, Japan includes HS code 4407.94 in its list of six-digit codes under that sub-heading, while Indonesia does not (see **Annexes 7 and 8**). The same mis-match between HS codes can be illustrated with other countries and territories, for example, between Taiwan and the EU (see **Annexes 9 and 10**). As a result, when a shipment is received with an HS code which is missing from the list of six-digit HS codes held by the trading partner, there is not necessarily a clear alternative coding option to choose, thus leaving the way open for the creation of a trade data discrepancy.
- Discrepancies in six-digit HS codes may arise at the point of code selection as, although these codes are standardized, *interpretation* of the HS descriptions for each code is subjective. **Annex 6**, giving the actual HS codes selected by Japan and Indonesia, illustrates this clearly.
- When coding extends beyond six digits, this creates discrepancy in international trade data by its very nature, as digits seven to 10 are for national designation (see **Annexes 7, 8, 9 and 10**).

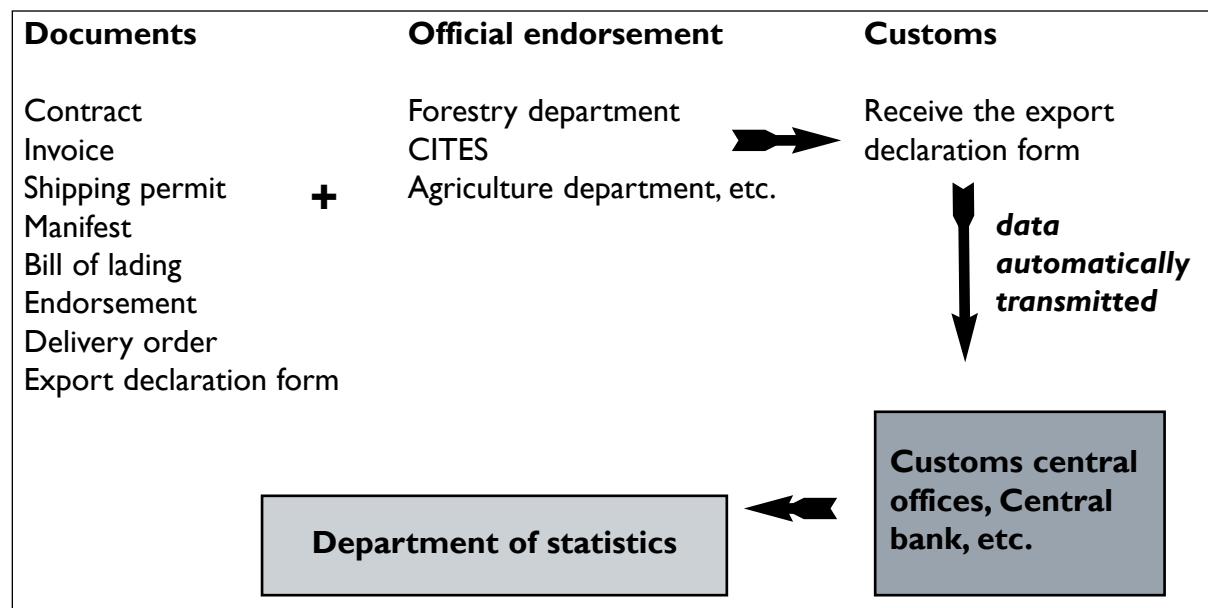

Export procedures and reporting systems for statistics generation

Export procedures

The procedures for export in any country or territory are unique, though there are similarities, as illustrated below. Generic activities vary in detail from country to country, while still satisfying the same basic functions. Summaries of export procedures and lists of agencies involved for China, Germany, Indonesia, the UK and the USA, are given in **Annex 11** and generic export procedures are represented in **Figure 2**.

Figure 2

A generic schematic of documents and stages from exporter to the generation of official trade statistics

Notes: The **bill of lading** is a document giving proof of particular goods loaded on a ship. The consignee normally needs to show the bill of lading in order to obtain the release of the goods. The **manifest** is a Customs document containing particulars of a ship and its cargo. The **shipping permit** is a licence to transport by ship, vouchsafing, for example, that toxic goods are not being transported. The **delivery order**, commonly referred to as a “d.o.”, is a business document with details of the order being shipped. The **endorsement** in this case refers to government endorsement in general, i.e. from any relevant government ministry, but not necessarily including those under “Official endorsement”. N.B. the list of documents shown above is not exhaustive.

- An **export declaration form**, to be submitted to Customs, is the most important form required by all governments in this study for any export. This is mandated by law, usually under the Customs legislation that governs the exit and entry of goods. In many countries, the form can be filled in electronically and this is the case for every country and territory studied for this report. There are a few exceptions, such as in the more remote ports of Indonesia. Otherwise, Japan has its NACCS;

the UK has its central Customs computer system, CHIEF; the USA its ACS; Singapore its TradeNet system; Indonesia its Electronic Data Interchange Network and others their own versions of comparable electronic systems. Each EU Member State included in this study has its own electronic clearance system. The EU will institute an electronic system called the Export Control System (ECS) and Automated Export System (AES) in stages in the near future.

The Customs export declaration form contains details such as names and addresses of the exporter and the buyer; expected date of export; port of loading and unloading and transit port (if any); invoice number; country destination; delivery system (FOB, CIF, or Cost of Freight (CF)); value of the exported product and the currency used; HS category of the product (9–10 digit HS code); numbers of containers; total number of pieces; total volume (in m³) and weight (in kg); unit price of exported items and total value, and sometimes other information.

In addition to the export declaration form, this study established that, in general, Customs also require submission of three types of documentation for export.

- An **official approval document, permit or licence** from government agencies approving export is usually needed. This could be a permit or licence from the forestry department, or other agency. In the case of Indonesia, as of 2003, exports have required the endorsement of the Indonesia Forest Industry Revitalisation Body *Badan Revitalisasi Industri Kayu* (BRIK), the Council of which comprises various officials from the Ministry of Forestry, other government agencies and the timber associations in Indonesia. Additionally in Indonesia, Customs require proof that the exporter has the official Forestry Department SKSHH (*Surat Keterangan Sahnya Hasil Hutan* or royalty collection form), a document from ETPIK (*Eksportir Terdaftar Produsen Industri Kehutanan*, the Registered Exporter for Forest Products) and receipt for payment of export taxes, where applicable. The SKSHH form shows that the forest royalty is paid, which is required for logs, sawn timber and plywood only, although with the ban on export of logs and sawn timber, the SKSHH is now mostly redundant. In addition, for CITES-listed timber species, a CITES export permit is required from the relevant CITES Management Authority.

In the USA, a US Fish and Wildlife Service (USFWS) export permit is needed for CITES species, as well as a US Department of Agriculture (USDA) permit for timber and timber products. Some countries require phytosanitary inspection and certification from the national agriculture department. As examples, in the UK this is issued by the Forestry Commission prior to release of a shipment by Customs, while the USDA's Animal and Plant Health Inspection Service (APHIS) inspects and clears shipments for CITES-listed plant species in the USA.

In the case of Malaysia, documented approval for export is needed from the Malaysian Timber Industry Board (MTIB) for Peninsular Malaysia and Sabah, and Sarawak Timber Industry Development Corporation (STIDC) for the State of Sarawak, Malaysia. Customs agents may

themselves only perform perfunctory processing if approval from these agencies is given for export of products.

- The second type of document comprises **shipping documents**—for example, the bill of lading, manifest, shipping permit and insurance documents.
- The third type of document comprises **business documents** and includes invoices, letters of credit, order sheets, etc.

Shipping and business documents are not considered official documents.

Customs *modus operandi* for inspection and verification of documents presented varies but, usually, the non-official documents are physically sent to the port authority by the exporter or agents and, therefore, not necessarily checked by Customs. The approved and endorsed Customs export declaration form follows to the port authority, whereupon goods can be released for shipment. The port authority presumably checks the various documents as required for the port's own purpose. In interviews with Customs in Indonesia, there was no indication that any communication took place between Customs and port authorities in relation to verification of the information in the PEB (see **Figure 3**) and other documents, a type of situation common to practically all the countries and territories studied.

Inspection of exported items is not necessarily carried out by Customs unless there is suspicion of illegality: this is the case in Indonesia. Under Indonesian *Customs Act No. 10/1990*, Customs cannot carry out physical checks of items without justification. In other countries,

Customs may physically inspect a shipment to cross-reference with the documentation presented and to deter smuggling activities. If Customs are not required to check the documentation against items, documents could be falsified to escape tax or for other reasons.

Statistics generation

Once the export declaration form has been completed and approved, it is transmitted to the national statistics department for record and analysis and to the central bank for monetary analysis and policy-making. Customs forms are sent electronically to national statistics departments (in the USA, to the Census Bureau, in China to the China Customs Statistics, for example) where trade statistics are compiled and generated. Other ministries and agencies use the records from the national statistics departments for their own statistical compilation and analysis. For example, ITTO obtains its annual forestry trade statistics for its Annual Review and Assessment of the World Timber Situation from the Joint Questionnaire on timber trade (JQ), which is distributed to ITTO and FAO member countries annually. The presumption is that the countries fill in the JQ using statistics from their national statistics departments (as well as figures from their forestry departments, as the statistics required for the JQ are not just trade statistics).

It can be assumed that, for all countries and territories, the export declaration form is filled out electronically. This form should then pass to the various government agencies in relatively intact form, with all data remaining the same as originally keyed in, with limited likelihood of introducing human error. Human error in transcribing could still exist, in particular for Indonesia for those PEB forms that are submitted physically in remoter provinces.

Import procedures and reporting systems for statistics generation

Import procedures

The import procedures for each country or territory are unique, but can be summarized generically, as in **Figure 4**. Importers submit an import declaration form to Customs and receive permission before clearing cargo for import. Various divisions in Customs check that the import declaration is correct before granting authorization for imports, after verifying the duties and consumption taxes are paid. Summaries of import protocols for China, Germany, Hong Kong, Italy, Japan, the UK and the USA are compiled in **Annex 12**. The import process for all the study countries and territories is relatively automated.

Japan has a relatively sophisticated Customs process and it is described in brief here to provide an insight into various stages of import procedure. To help them complete the import declaration form, importers in Japan enlist the assistance of a specialized Customs agent to deputize for them during Customs clearance. The practice of using a Customs agent is endorsed by the *Customs Brokerage Law 1967* and these agents are licensed by the Japanese Government, must have passed a national examination to ensure they are well versed in Customs laws and procedures, and are based in Customs offices. The Customs agents' functions include collecting the invoice from the exporter, bill of lading from the shipping company, and tally sheets (inventories of timber in shipments) from the warehouse company. They complete the Japanese import declaration form electronically. The timber inventories in Japan are made by agents of the importers, employed to inspect timber imports physically, using the

Credit: Tim Porter/WWF-Canon

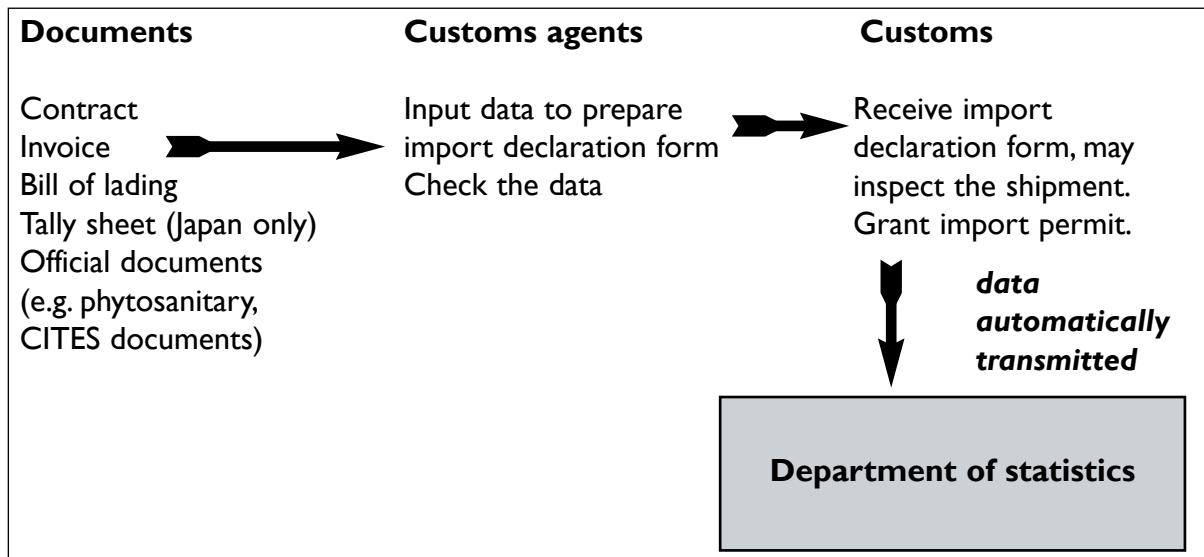

Unloading logs imported from Sabah and Sarawak at Nagoya port, Japan

invoice as their basis for checks and employing Government-authorized weights and scales. Customs in Japan carry out most of their import declarations using the NACCS, which includes details on the import number, tax payments, country of export and HS code, and checks that all relevant Japanese laws and regulations have been observed. Additional to the import declaration are the various other documents required for import, such as

invoices, phytosanitary certificates (see **Figure 4**), which are not necessarily in electronic form. The invoice is the form relied upon for information used in the import declaration form. Wood products appear to be sorted correctly, according to Japanese HS categories, on import.

Figure 4

Generic schematic of documents and stages from importer to the generation of official trade statistics

In Malaysia, there is an additional process prior to importing logs, whereby the Ministry of Plantations Industry and Commodities has to issue a licence, managed by MTIB, to allow importation. For log imports only, the checks are carried out by the MTIB and STIDC. Normally, once this import licence is provided to Customs, only perfunctory processing may occur prior to releasing the shipment.

In the USA, the USFWS import permit may be needed for CITES species, as well as the USDA import permit, while the USDA's Animal and Plant Health Inspection Service, APHIS, inspects and clears shipments for CITES-listed plant species. Other countries similarly require phytosanitary inspection and certification from their agriculture department (or an accompanying phytosanitary certificate from the source country) prior to release of the shipment by Customs. The USA conducts reconciliation studies to identify discrepancies and errors where trade data with the trading partner are compared and trade documentation audited. This is more frequently carried out with Canada and Mexico, but also with others including Japan, South Korea, Australia and the EU (Goetzl and Wood Resources International, 2003).

Singapore uses a single window Customs clearance system, that allows a single deposit of a single body of information that can be accessed by various government agencies to satisfy their official requirements. Customs may decide to inspect the import items physically, but this is done on a case-by-case basis.

Statistics generation

For all countries and territories studied, the official trade statistics are generated from the Customs data. Customs forms are sent electronically to the national statistics departments (for example, the Census Bureau in the USA, China Customs Statistics in China), where trade statistics are compiled and generated.

DISCUSSION AND CONCLUSIONS

The premise of this study is that international trade data discrepancies are of concern, especially in so far as they may be indicators of illegal trade; such discrepancies, and hence any illegal logging and illegal timber trade linked to them, could be better controlled by Customs through changes in protocols, including requirements for information. Having reviewed existing levels of discrepancy in tropical timber trade statistics for the selected countries and territories, as well as the functions and protocols of associated Customs agencies and how these relate to statistics generated, the following conclusions are drawn:

- The wide discrepancies known to exist in the statistics for timber trade are attributed to a number of factors, many of which are legitimate, but some of which are the result of illegal activities. No clear idea of the proportion of discrepancy attributable to illegal practice can be formed on the basis of the data available, however, it is likely to be significant.

- The levels of discrepancy in bilateral tropical timber trade data for the study countries and territories for categories HS 4403 (“wood in the rough....”), HS4408 (“sheets for veneering...”), HS4412 (“plywood, veneered panels...”), and for HS4407 (“wood sawn or chipped lengthwise...”), 2000–2006 ranged from low to consistently significant. The fact that there were a number of instances where discrepancies recorded were less than 5%, and in some, even less than 0.5% for very large volumes traded shows that it is possible to have fairly accurate data. On the other hand, there are a number of cases where discrepancies are stark, for example, where records of zero exports pair with records of shipments imported, or where the statistics record imports of Indonesian logs despite an Indonesian export ban on the same since 2001, prompting concern about the protocols at export and import.
- This study found that differences in Customs protocols as a factor influencing data discrepancy could provide ample scope for inconsistency. While the basis for compilation of timber trade statistics is similar in the countries and territories considered, in that Customs declaration forms, an export form in the case of exporting countries, and an import form for importing countries, are used, the systems are not so similar that they facilitate cross-checking. Even where cross-checking has been facilitated, e.g. by the increase in use of electronic submission of data, it does not necessarily occur. Such cross-checking would, however, be instrumental in eliminating discrepancies in trade data, and hence may help to stop illegal timber trade. However, such cross-checking to eliminate discrepancies in trade data should not be the norm, owing to time pressures, workload of enforcement officers, and the smooth running of global trade. As the results showed, there are sufficient numbers of cases of trade data with less than 5% discrepancies, and even down to 0%, that have been recorded, although these were in small number. In these cases, factors causing discrepancies listed earlier, such as conversion factors, differences in log scaling methods, different HS code classification, etc., were evidently not active in preventing accurate capture of data for exported and corresponding imported commodities between study countries. Since the Customs protocols are similar each and every time, and since discrepancies vary wildly between countries and over time, a new solution is required to address the consistency challenge in eliminating wide discrepancies in trade data. One possible solution is to carry out prior notification of timber exports to the importing countries’ Customs or other relevant authorities.
- Transmission of trade data from Customs authorities to their respective national statistics departments is not thought likely to be responsible in itself for generating discrepancies, now that such transfer is electronic for the main part. However, there does not appear to be any cross-referencing between agencies in-country.
- One of the problems in cross-checking bilateral timber trade data is that there is no uniformity over which documents should be used for the purpose and, moreover, not all documents required for export accompany timber shipments. Although business and shipping documents, such as the bill of lading, manifest and insurance documents, accompany the shipment, these are not official documents of the government of export. The Customs export declaration form, which is the official

export declaration, is not sent to the importing country with the consignment to which it relates. As this document carries key information, such as the HS codes and information on the geographical origin of the timber shipment, as well as carrying the weight of official authorization, its presentation to, and verification by, importing authorities could presumably go a long way towards reducing current levels of discrepancies in trade statistics. As mentioned above, for Indonesia, since the policy includes a log and sawn timber export ban, no Customs export declaration can be issued even if business and shipping documents are available. Sight of the export declaration form at import does not, of course, eliminate chances of falsification of the Customs export document, but this then becomes an enforcement issue, rather than one of policy and, meanwhile, it could greatly tighten controls to have the single and same document passed by authorities in both exporting and importing country or territory. As things stand, depending on the frequency of Customs checks on documentation as it relates to actual items shipped, there is the possibility that accompanying documents could be deliberately mis-filled, only to be amended as required in transit. However, such practice, as well as any other act deliberately intended to misrepresent the contents of a shipment, would immediately carry more risk if the government-stamped Customs export declaration form were required on import, where Customs does sometimes inspect shipments alongside accompanying documentation. Transmission of the Customs export declaration form with its associated shipment could also provide clarity over which document should be treated as the primary source of information for filling in the import declaration, as the Customs declaration form would take precedence over any non-official documents, of the sort that currently accompany shipments.

- Yet more advantage and clarity still could be gained if all the documents—shipping, business and other documents, as well as the export declaration form—were endorsed and certified as seen by Customs prior to export. These endorsed documents, if presented to Customs on import, should necessarily then be the same documents used during export procedures. Presently, although businesses may want to ensure that their invoices are fulfilled and hence apply scrutiny at the point of import to ensure the goods correspond to the order, this scrutiny is independent of Customs requirements for control and monitoring.
- Clearly, a requirement that the Customs export declaration form should travel with shipments to the importing country could not begin to tackle all causes of data discrepancy—smuggling, time lag between export and import, and differences in methods for evaluating volumes and prices, for example, would lie beyond the scope of this measure, as would any difficulties in communications between exporting and importing authorities, unclear use of HS codes, or inadequate enforcement of shipping protocols. However, some of these are issues that could be addressed through changes in Customs protocols. Including weights of shipments to help in cross-checking data; greater clarity over HS codes; providing training in identification of shipment contents to Customs officials; and reciprocal policy arrangements over trade bans are all steps that could be taken to strengthen the role of Customs in minimizing irregularities that lead to discrepancies in timber trade statistics.

RECOMMENDATIONS

Implementation of the recommendations below will require acceptance and adoption through a variety of different political and procedural avenues. Political buy-in could be on a bilateral basis, for example as part of a memorandum of understanding on illegal logging, such as those signed between Indonesia and the UK, China, and Japan, which can then engender changes in Customs procedures. Changes could also occur through regionally agreed Customs protocols, such as Customs co-operation within ASEAN and other relevant fora at the international level, including the East Asia Forest Law Enforcement and Governance (FLEG) committees, ITTO and FAO. The Customs Mutual Assistance Agreement, a bilateral Customs agreement for generic Customs co-operation, could be a useful instrument if combined with other bilateral initiatives on illegal logging. The SAFE Framework of Standards of the WCO has a number of protocols that could adopt some of the recommendations listed below. However, the SAFE standards are only applicable to those WCO countries that agree to them. Further consideration is required to determine the best approach towards the acceptance, adoption and implementation of the recommendations that follow.

- The Customs export declaration form, a legal document, should be one of the documents submitted, acknowledged and providing the main evidence for verification by Customs on importation of timber. Shipping and business documentation should only provide supporting evidence and not be the main documentation referenced, as is the case at present. The WCO should consider the adoption of this recommendation in their SAFE Framework of Standards. ITTO and FLEG could encourage their members to take up this recommendation.
- Customs import declaration forms should refer to standardized, Customs export-validated documentation. Currently, documents used by authorities to verify exports—for example the invoice, manifest, bill of lading or other documentation with the details required by Customs (e.g. volume, value)—are not validated against changes made later. The WCO should consider this within the context of the SAFE Framework of Standards. ITTO and FLEG initiatives should also encourage their constituency to implement this change in validation procedure for international timber shipments.
- Adequate training should be provided to Customs officials with regard to proper use of HS codes for timber products. Beyond this, Customs in most countries already work closely with relevant agencies with expertise in identification and classification of timber products, such as forestry departments. A review of the mechanisms by each country to reduce bottlenecks, if any, and to ensure effective and efficient verification by those relevant agencies on behalf of Customs would greatly reduce the burden on Customs officials prior to final release of the shipment for export or import. The WCO's capacity-building strategy and its implementation, in collaboration with ITTO and FAO, could undertake identification and meeting of the training needs of each member country.

- The WCO, in conjunction with its member governments, should work to ensure that the same set of six-digit HS codes is used for timber and timber products traded between any two trading entities and that the HS code used in Customs export declaration forms is verified by importing Customs at the point of entry. It should also strive to ensure standardized treatment of re-exports, whereby importing countries record the country of origin of shipments and not the transit country.
- The capacity-building programmes of the WCO and ITTO should consider including workshops and capacity-building activities aimed at standardizing identification of timber according to HS categories, and measurement techniques for key species and products.
- The option of using prior notification as a mechanism to reduce incidences of illegal timber trade between trading countries and territories should be evaluated. The evaluation should assess whether the mechanism could work, either for timber trade in general, or for specific timber products or even species. ITTO and FAO should commission a detailed project on this and present the results of the study to their membership for consideration and action.
- Governments should ensure stronger and more regular dialogue with each other in order to promote reciprocal policies for any bans or restrictions in place and thereby reduce illegal timber trade in practice. Specifically, complementary policy is needed in order for the Indonesian ban on logs and sawn timber exports to be effective. ITTO, FAO and other inter-governmental agencies and international fora, such as FLEG and the Asia Forest Partnership, could all play a role to promote reciprocity of policies.
- Customs bodies should have regular bilateral, regional and global meetings with their counterparts in other countries and territories to review consistent discrepancies in trade statistics and to discuss possible solutions to illegal timber trade. Direct and rapid communications between Customs agencies should be facilitated to promote fast cross-referencing of information for validation of shipments on a real-time basis. The WCO and Customs agencies are well placed to follow up on this recommendation.
- Conversion factors used as standard by ITTO should be verified and updated prior to being adopted by all ITTO member countries. ITTO can provide assistance to its member countries to carry this out.
- While there are standards of measurements used to capture the data for Customs, it would be useful for cross-referencing purposes to include weights as mandatory for all timber shipments. While weights do not provide a standardized measurement, owing to degree of water content, they still provide a useful a double-check on quantity that the WCO and national Customs agencies should use.

- Further studies should be conducted on Free Trade Zones, warehousing for timber commodities, and territorial and political considerations, such as the existence of two Customs systems in one country, to determine the influence and impact of such systems on timber trade statistics discrepancies. ITTO should commission a project on this issue and present the study results to ITTC for its consideration, and adoption of the recommendations.

Annex 5

Composition of commodities in the Indonesia Customs tariff code for HS4403: wood in the rough

44.03	Wood in the rough, whether or not stripped of bark or sapwood, or roughly squared.
4403.10	-Treated with paint, stains, creosote or other preservatives : --Of coniferous species : ---Agathis
4403.10.110	---Pine
4403.10.120	---Cematan/Alau/Cin
4403.10.140	---Melur/Jamuju
4403.10.190	---Other --Of non-coniferous species : ---Meranti : ----White Meranti
4403.10.211	----Other
4403.10.219	----Ramin
4403.10.230	----Pulai
4403.10.240	----Kapur
4403.10.250	----Keruing
4403.10.260	----Matoa
4403.10.270	----Teak ---Other : ----Ebony wood
4403.10.291	----Iron wood
4403.10.292	----Jelutong
4403.10.293	----Cendana; Laka
4403.10.294	----Kuku: Perupuk; Sonokeling; Sonokembang; Sungkai
4403.10.295	----Giam; Jeungjing/Sengon; Johar; Karet; Kulim; Limus Piit/Membacang; Mahoni; Mindi; Nyatoh; Pasang; Sawo kecik; Trembesi; Ulin; Weru
4403.10.297	----Cempaka; Durian burung; Rengas Sindur Sempetir; Surian; Balau/Damar laut; Bangkirai; Banitan; Bayur; Berumbung; Bintanggur; Binuang; Bugis; Cengal; Duabanga; Gempol; Geronggang; Gofasa; Jabon; Jangkang; Merbau; Kapas-kapas; Kayu ara; Kayu terap; Kedondong hutan; Kelar/Jambu-jambu; Kelat; Kelumpang; Kembang semangkok; Kemiri; Kempas; Kenari; Keranji; Ketapang; Ketimun/ Uban-uban; Kondur; Kupang; Mahang kapur; Malapari; Medang; Membacang; Mempisang; Merawan; Mersawa; Palapi; Perepat darat; Petanang; Pinang K; Punak; Puspa/Sinar telu; Rasamala; Resak; Saninten; Semantok; Sepat; Sesendok; Simpur; Suntai; Tanjung; Tembesu; Terentang
4403.10.299	----Other
4403.20	-Other, Coniferous :

4403.20.100	--For pulping
4403.20.200	--Agathis
4403.20.300	--Pine
4403.20.400	--Cematan/Alau/Cin; Melur
4403.20.900	--Other
	-Other, of tropical wood specified in Subheading
	Note 1 to this Chapter :
4403.41	--Dark Red Meranti, Light Red Meranti and Meranti Bakau :
4403.41.100	---Dark Red Meranti, Light Red Meranti
4403.41.200	---Meranti Bakau
4403.49	--Other :
4403.49.100	---White Meranti
4403.49.200	---Yellow Meranti
4403.49.300	---Keruing
4403.49.400	---Ramin
4403.49.500	---Kapur
4403.49.600	---Teak
4403.49.700	---Jelutong
4403.49.800	---Jongkong
4403.49.900	---Other
	-Other :
4403.91	--Of Oak (<i>Quercus</i> spp.) :
4403.91.100	---For pulping
4403.91.900	---Other
4403.92	--Of Beech (<i>Fagus</i> spp.) :
4403.92.100	---For pulping
4403.92.900	---Other
4403.99	--Other :
4403.99.100	---For pulping
	---Other :
4403.99.910	----Pulai
4403.99.920	----Matoa
4403.99.930	----Ebony
4403.99.940	----Iron wood
4403.99.950	----Cendana, Laka
4403.99.960	----Kuku; Perupuk; Sonokeling; Sonokembang; Sungkai
4403.99.970	----Giam; Jeungjing/Sengon; Johar; Karet; Kulim; Limus Piit/Membacang; Mahoni; Mindi; Nyatoh; Pasang; Sawo kecik; Trembesi; Ulin; Weru
4403.99.980	----Cempaka; Durian burung; Rengas; Sindur/Sempetir; Surian; Meranti batu; Balau/Damar laut; Bangkirai; Banitan; Bayur; Berumbung;
	Bintanggur; Binuang; Bugis; Cengal; Duabanga; Gempol;
	Geronggang; Gofasa; Jabon; Jangkang; Merbau; Kapas-kapas;

	Kayu ara; Kayu terap; Kedondong hutan; Kelar/Jambu-jambu; Kelat;
	Kelumpang; Kembang semangkok; Kemiri; Kempas; Kenari; Keranji; Ketapang; Ketimun/Uban-uban; Kondur; Kupang; Mahang kapur;
	Malapari; Medang; Membacang; Mempisang; Merawan; Mersawa; Palapi; Perepat darat; Petanang; Pinang K; Pohon kelapa; Punak;
	Puspa/sinar telu; Rasamala; Resak; Saninten; Semantok; Sepat; Sesendok; Simpur; Suntai; Tanjung; Tembesu; Terentang
4403.99.990	----Other

HS code classification for timber products from Japan

Statistical code	Description
H.S. code	
44.01	Fuel wood, in logs, in billets, in twigs, in faggots or in similar forms; wood in chips or particles; sawdust and wood waste and scrap, whether or not agglomerated in logs, briquettes, pellets or similar forms.
4401.10	000 Fuel wood, in logs, in billets, in twigs, in faggots or in similar forms
	Wood in chips or particles
4401.21	000 Coniferous
4401.22	000 Non-coniferous
4401.30	000 Sawdust and wood waste and scrap, whether or not agglomerated in logs, briquettes, pellets or similar forms
44.02	Wood charcoal (including shell or nut charcoal), whether or not agglomerated.
4402.10	000 Of bamboo
4402.90	Other
	010 – Coconut shell charcoal
	– Other
	091 -- Moulded pieces or shapes
	092 -- In powder form or granule form
	099 -- Other
44.03	Wood in the rough, whether or not stripped of bark or sapwood, or roughly squared.
4403.10	Treated with paint, stains, creosote or other preservatives
	100 – Coniferous
	– Non-coniferous
	210 -- Of Kiri (Paulownia spp.)
	220 -- Of Dipterocarpaceae
	230 -- Other
4403.20	Other, coniferous
	100 – Of Pinus spp.
	200 – Of Sitka spruce
	300 – Of genus Abies and genus Picea, excluding sitka spruce
	400 – Of genus Larix
	500 – Of white cedar, yellow cedar and other genus Chamaecyparis
	600 – Of hemlock and other genus Tsuga
	700 – Of red cedar and other genus Thuja
	800 – Of Douglas fir and other genus Pseudotsuga
	900 – Other
	Other, of tropical wood specified in Subheading Note 1 to this Chapter :
4403.41	000 Dark Red Meranti, Light Red Meranti and Meranti Bakau
4403.49	Other
	100 – White Lauan, White Meranti, White Seraya, Yellow Meranti and Alan
	– Keruing, Ramin, Kapur, Teak, Jongkong, Merbau, Jelutong and Kempas
	-- Of Keruing and Kapur
	211 --- Roughly squared or half squared
	219 --- Other
	-- Other
	291 --- Of teak
	292 --- Of ramin

	299	---- Other
	300	- Okoume, Obeche, Sapelli, Sipo, Acajou d'Afrique, Makore and Iroko
	600	- Other
		Other
4403.91	000	Of oak (<i>Quercus</i> spp.)
4403.92	000	Of beech (<i>Fagus</i> spp.)
4403.99		Other
	100	1 Of Kiri (<i>Paulownia</i> spp.), excluding roughly squared or half squared
		2 Other
	910	- Of Kiri (<i>Paulownia</i> spp.)
	920	- Of Dipterocarpaceae
	990	- Other
44.04		Hoopwood; split poles; piles, pickets and stakes of wood, pointed but not sawn lengthwise; wooden sticks, roughly trimmed but not turned, bent or otherwise worked, suitable for the manufacture of walking -sticks, umbrellas, tool handles or the like; chipwood and the like.
4404.10		Coniferous
	100	1 Split poles, piles, pickets and stakes, and hoopwood
	210	2 Wooden stricks
	290	3 Other
4404.20		Non-coniferous
	100	1 Split poles, piles, pickets and stakes, and hoopwood
	210	2 Wooden stricks
	290	3 Other
44.05		
4405	000	Wood wool; wood flour.
44.06		Railway or tramway sleepers (cross-ties) of wood.
4406.10	000	Not impregnated
4406.90	000	Other
44.07		Wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm.
4407.10		Coniferous
		1 Of <i>Pinus</i> spp., <i>Abies</i> spp., (other than California red fir, grand fir, noble fir and pacific silver fir) or <i>Picea</i> spp., (other than sitka spruce), not more than 160mm in thickness
	110	(1)Planed or sanded
		(2)Other
	121	A Of <i>Pinus</i> spp.
	129	B Other
		2 Of genus <i>Larix</i> , not more than 160mm in thickness
	210	(1)Planed or sanded
	290	(2)Other
		3 Other
	310	- Of incense cedar
		- Other
		-- Planed or sanded
	321	--- Of <i>Pinus</i> spp., genus <i>Abies</i> , or genus <i>Picea</i> , moe than 160mm in thickness
	322	--- Of hemlock and other genus <i>Tsuga</i>
	323	--- Of douglas fir and other genus <i>Pseudotsuga</i>
	329	--- Other
		-- Other

	330	--- Of <i>Pinus</i> spp.
		--- Of sitka spruce
	341	---- Not more than 160mm in thickness
	349	---- More than 160mm in thickness
	350	--- Of genus <i>Abies</i> and genus <i>Picea</i>
		--- Of white cedar, yellow cedar and other genus <i>Chamaecyparis</i>
	361	---- Not more than 160mm in thickness
	369	---- More than 160mm in thickness
		--- Of hemlock and other genus <i>Tsuga</i>
	371	---- Not more than 160mm in thickness
	379	---- More than 160mm in thickness
		--- Of douglas fir and other genus <i>Psudotsuga</i>
	381	---- Not more than 160mm in thickness
	389	---- More than 160mm in thickness
		--- Other
	391	---- Not more than 160mm in thickness
	399	---- More than 160mm in thickness
		Of tropical wood specified in Subheading Note 1 to this Chapter :
4407.21	000	Mahogany (<i>Swietenia</i> spp.)
4407.22	000	Virola, Imbuia and Balsa
4407.25		Dark Red Meranti, Light Red Meranti and Meranti Bakau
	010	– Planed or sanded
	090	– Other
4407.26		White Lauan, White Meranti, White Seraya, Yellow Meranti and Alan
	010	– Planed or sanded
	090	– Other
4407.27	000	Sapelli
4407.28	000	Iroko
4407.29		Other
		1 Of Dipterocarpaceae
	110	– Planed or sanded
	190	– Other
		2 Other
	215	– Of teak
		– Other
	291	--- Of ramin
	299	--- Other
		Other
4407.91	000	Of oak (<i>Quercus</i> spp.)
4407.92	000	Of beech (<i>Fagus</i> spp.)
4407.93	000	Of maple (<i>Acer</i> spp.)
4407.94	000	Of cherry (<i>Prunus</i> spp.)
4407.95	000	Of ash (<i>Fraxinus</i> spp.)
4407.99		Other
		1 Of Dipterocarpaceae
	310	– Planed or sanded
	390	– Other
		2 Other

	100	– Of Tsuge or boxwood, Tagayasan (<i>Cassia siamea</i>), red sandalwood, rosewood or ebony wood
	200	– Of Kiri(<i>Paulownia spp.</i>)
	400	– Of <i>lignum vitae</i>
	500	– Other
44.08		Sheets for veneering (including those obtained by slicing laminated wood), for plywood or for similar laminated wood and other wood, sawn lengthwise, sliced or peeled, whether or not planed, sanded, spliced or end-jointed, of a thickness not exceeding 6 mm.
4408.10		Coniferous
	010	1 Of incense cedar (of a length not exceeding 20cm and of a width not exceeding 8cm)
		2 Other
		(1)Obtained by slicing laminated wood
	110	A Laminated lumber
	190	B Other
		(2)Other
	210	– Sheets for plywood
	290	– Other
		Of tropical wood specified in Subheading Note 1 to this Chapter
4408.31		Dark Red Meranti, Light Red Meranti and Meranti Bakau
		1 Obtained by slicing laminated wood
	110	(1)Laminated lumber
	190	(2)Other
		2 Other
	210	– Sheets for plywood
	290	– Other
4408.39		Other
		1 Of Padok(kwarin)
		(1)Obtained by slicing laminated wood
	110	A Laminated lumber
	120	B Other
	190	(2)Other
	200	2 Of Jelutong, not more than 20cm in length and not more than 8cm
		3 Of teak
		(1)Obtained by slicing laminated wood
	510	A Laminated lumber
	520	B Other
	590	(2)Other
		4 Other
		(1)Obtained by slicing laminated wood
	410	A Laminated lumber
	420	B Other
		(2)Other
	910	– Sheets for plywood
	990	– Other
4408.90		Other
		1 Of Tsuge or boxwood, Tagayasan (<i>Cassia siamea</i>), red sandalwood, rosewood or ebony wood
		(1)Obtained by slicing laminated wood
	110	A Laminated lumber

	120	B Other
	190	(2)Other
		2 Other
		(1)Obtained by slicing laminated wood
	510	A Laminated lumber
	520	B Other
		(2)Other
	610	– Sheets for plywood
	690	– Other
44.09		Wood (including strips and friezes for parquet flooring, not assembled) continuously shaped (tongued, grooved, rebated, chamfered, V-jointed, beaded, moulded, rounded or the like) along any of its edges, ends or faces, whether or not planed, sanded or end-jointed.
4409.10		Coniferous :
	100	1 Drawn wood
	200	2 Beadings and mouldings
		3 Other
	310	(1)Of Pinus spp., Abies spp.(other than California red fir, grand fir, noble fir and pacific silver fir), Picea spp.(other than sitka spruce) and Larix spp., not more than 160mm in thickness
	320	(2)Other
		Non-coniferous
4409.21		Of bamboo
	100	1 Drawn wood
	200	2 Beadings and mouldings
		3 Other
4409.29		Other
	100	1 Drawn wood
	200	2 Beadings and mouldings
		3 Other
	910	(1)Of Dipterocarpaceae
		(2)Other
	991	– Of Kwarin, Tsuge or boxwood, Tagayasan (Cassia siamea), red sandalwood, rosewood or ebony wood
	992	– Of Kiri(Paulownia spp.)
	999	– Other
44.10		Particle board, oriented strand board (OSB) and similar board (for example, waferboard) of wood or other ligneous materials, whether or not agglomerated with resins or other organic binding substances.
		Of wood
4410.11		Particle board
		1 In sheets or in boards
	110	– Unworked or not further worked than sanded
	120	– Surface-covered with melamine-impregnated paper
	190	– Other
	900	2 Other
4410.12		Oriented strand board (OSB)
		1 In sheets or in boards
	110	– Unworked or not further worked than sanded
	190	– Other
	900	2 Other

4410.19		Other
	100	1 In sheets or in boards
	900	2 Other
4410.90		Other
	100	1 In sheets or in boards
	900	2 Other
44.11		Fibreboard of wood or other ligneous materials, whether or not bonded with resins or other organic substances.
		Medium density fibreboard (MDF) :
4411.12		Of a thickness not exceeding 5 mm
	100	1 Of a density exceeding 0.8g/cm ³
	200	2 Of a density not exceeding 0.8g/cm
4411.13		Of a thickness exceeding 5 mm but not exceeding 9 mm
	100	1 Of a density exceeding 0.8g/cm ³
	200	2 Of a density not exceeding 0.8g/cm
4411.14		Of a thickness exceeding 9 mm
	100	1 Of a density exceeding 0.8g/cm ³
	200	2 Of a density not exceeding 0.8g/cm
		Other
4411.92	000	Of a density exceeding 0.8 g/cm ⁽³⁾
4411.93	000	Of a density exceeding 0.5 g/cm ⁽³⁾ but not exceeding 0.8 g/cm ⁽³⁾
4411.94	000	Of a density not exceeding 0.5 g/cm ⁽³⁾
44.12		Plywood, veneered panels and similar laminated wood.
4412.1		Of bamboo
		1 Plywood consisting solely of sheets of wood, each ply not exceeding 6mm thickness
		(1)With at least one outer ply of Dark Red Meranti, Light Red Meranti, White Lauan, Sipo, Limba, Okoume, Obeche, Acajou d'Afrique, Sapelli, Virola, Mahogany (<i>Swietenia spp.</i>), Palissandre de Para, Polissandre de Rio, Polissandre de Rose
		A Varnished, printed, grooved, overlaid or similarly surface-worked
	111	(a)Tangued, grooved or similarly works on one or both sides
	119	(b)Other
		B Other
	191	(a)Less than 6mm in thickness
	199	(b)Other
		(2)Other
		A Varnished, printed, grooved, overlaid or similarly surface-worked
	211	(a)Tangued, grooved or similarly works on one or both sides
	219	(b)Other
		B Other
	291	(a)Less than 6mm in thickness
	299	(b)Other
		2 Other
	910	(1)Laminated lumber
	990	(2)Other
		Other plywood, consisting solely of sheets of wood (other than bamboo), each ply not exceeding 6 mm thickness :
4412.31		With at least one outer ply of tropical wood specified in Subheading Note 1 to this Chapter

		- With at least one outer ply of Dark Red Meranti, Light Red Meranti, White Lauan, Sipo, Limba, Okoume, Obeche, Acajoud'Afrique, Sapelli, Virola, Mahogany (<i>Swietenia</i> spp.), Palissandre de Para, Polissandre de Rio, Palissandre de Rose
		A Varnished, printed, grooved, overlaid or similarly surface-worked
	111	(1)Tangued, grooved or similarly works on one or both sides
	191	(2)Other
		2 Other
		(1)Less than 6mm in thickness
	911	- Less than 3mm in thickness
	921	- Less than 6mm but not less than 3mm in thickness
		(2)Other
	931	- Less than 12mm but not less than 6mm in thickness
	941	- Less than 24mm but not less than 12mm in thickness
	951	- Not less than 24mm in thickness
		#NAME?
		A Varnished, printed, grooved, overlaid or similarly surface-worked
	119	(1)Tangued, grooved or similarly works on one or both sides
	199	(2)Other
		2 Other
		(1)Less than 6mm in thickness
	919	- Less than 3mm in thickness
	929	- Less than 6mm but not less than 3mm in thickness
		(2)Other
	939	- Less than 12mm but not less than 6mm in thickness
	949	- Less than 24mm but not less than 12mm in thickness
	959	- Not less than 24mm in thickness
4412.32		Other, with at least one outer ply of non-coniferous wood
		1 Varnished, printed, grooved, overlaid or similarly surface-worked
	110	(1)Tangued, grooved or similarly works on one or both sides
	190	(2)Other
		2 Other
		(1)Less than 6mm in thickness
	911	- Less than 3mm in thickness
	912	- Less than 6mm but not less than 3mm in thickness
		(2)Other
	991	- Less than 12mm but not less than 6mm in thickness
	992	- Less than 24mm but not less than 12mm in thickness
	993	- Not less than 24mm in thickness
4412.39		Other
		1 Varnished, printed, grooved, overlaid or similarly surface-worked
	110	(1)Tangued, grooved or similarly works on one or both sides
	190	(2)Other
		2 Other
	910	(1)Less than 6mm in thickness
		(2)Other
	991	- Less than 12mm but not less than 6mm in thickness
	992	- Not less than 12mm in thickness

		Other
4412.94		Blockboard, laminboard and battenboard
		1 Laminated lumber
	110	– With at least one ply of tropical wood specified in Subheading Note 1 to this Chapter
	120	– Other, with at least one outer ply of non-coniferous wood
	190	– Other
	900	2 Other
4412.99		Other
		1 Laminated lumber
	110	– With at least one ply of tropical wood specified in Subheading Note 1 to this Chapter
	120	– Other, with at least one outer ply of non-coniferous wood
	190	– Other
		2 Other
	910	– With at least one ply of tropical wood specified in Subheading Note 1 to this Chapter
	920	– Other, with at least one outer ply of non-coniferous wood
	990	– Other
44.13		
4413	000	Densified wood, in blocks, plates, strips or profile shapes.
44.14		
4414	000	Wooden frames for paintings, photographs, mirrors or similar objects.
44.15		Packing cases, boxes, crates, drums and similar packings, of wood; cable-drums of wood; pallets, box pallets and other load boards, of wood; pallet collars of wood.
4415.10	000	Cases, boxes, crates, drums and similar packings; cable –drums
4415.20	000	Pallets, box pallets and other load boards; pallet collars
44.16		
4416	000	Casks, barrels, vats, tubs and other coopers' products and parts thereof, of wood, including staves.
44.17		
4417		Tools, tool bodies, tool handles, broom or brush bodies and handles, of wood; boot or shoe lasts and trees, of wood.
	010	1 Boot or shoe lasts and trees
	020	2 Other
44.18		Builders' joinery and carpentry of wood, including cellular wood panels, assembled flooring panels , shingles and shakes.
4418.10	000	Windows, French-windows and their frames
4418.20	000	Doors and their frames and thresholds
4418.40	000	Shuttering for concrete constructional work
4418.50	000	Shingles and shakes
4418.60	000	Posts and beams
		Assembled flooring panels
4418.71	000	For mosaic floors
4418.72	000	Other, multilayer
4418.79	000	Other
4418.9		Other
	100	1 Cellular wood panels
		2 Other

	210	(1)Tategu (door, window sash and the like) and Tokobashira
		(2)Other
	221	– Transom
	223	– Other flooring panels and panels other than assembled flooring panels
		– Other
	222	-- Structural laminated lumber
	229	-- Other
44.19		
4419		Tableware and kitchenware, of wood.
		1 Waribashi
	110	– Of bamboo
	190	– Other
	900	2 Other
44.20		Wood marquetry and inlaid wood; caskets and cases for jewellery or cutlery, and similar articles, of wood; statuettes and other ornaments, of wood; wooden articles of furniture not falling in Chapter 94.
4420.10	000	Statuettes and other ornaments, of wood
4420.90		Other
	010	1 Wood marquetry or inlaid wood
	090	2 Other
44.21		Other articles of wood.
4421.10	000	Clothes hangers
4421.90		Other
	100	1 Kushi of bamboo
	200	2 Match splints
		3 Other
	910	(1)Of Kwarin, Tsuge or boxwood, Tagayasan (<i>Cassia siamea</i>), red sandal wood, rosewood or ebony wood, excluding ebony wood with white streaks
		(2)Other
	920	– Fans and hand screens, nonmechanical; frames and handles thereof and parts of such frames and handles
		– Other
	991	-- Of those obtained by splicing wood sawn lengthwise, whether or not end-jointed
	999	-- Other

Annex 9

HS code classification for timber products from Taiwan

HS code TW	items (rough wood)
4403.10.00.10-1	Rubber wood in the rough, whether or not stripped of bark or sapwood, or roughly squared, treat with preservatives
4403.10.00.90-4	Other wood in the rough, whether or not stripped of bark or sapwood, or roughly squared, treat with paint, stains, creosote or other preservatives
4403.20.10.00-9	Scented and fragrant wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.11-9	(chamaecyparis spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.12-8	(Thuja spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.13-7	(Pseudotsuga spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.14-6	(Tsuga spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.15-5	(Picea spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.16-4	(Araucaria & agathis spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.17-3	(Pinus spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.18-2	(Cunninghamia lanceolata spp.) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.20.90.90-3	Other wood in the rough, coniferous, whether or not stripped of bark or sapwood, or roughly squared
4403.41.00.00-6	Dark Red Meranti, Light Red Meranti, and Meranti Bakau in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.49.00.10-6	White Lauan, White Meranti, White Seraya, Yellow Meranti and alam wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.49.00.20-4	Keruing, ramin, kapur, teak, jongkong, merbau, jelutong and kempas, wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.49.00.30-2	Okoume, Obeche, Sapelli, Sipo, AAcajou d afrique, Makore and Iroko wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.49.00.40-0	Tiama, Mansonia, Ilomba, Dibetou, Limba and Azobe, wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.49.00.90-9	Other tropical wood specified in subheading Note 1 to this Chapter, in the rough whether or not stripped of bark or sapwood, or roughly squared
4403.91.00.00-5	Oak wood (Quercus spp.) in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.92.00.00-4	Beech wood (Fagus spp.) in the rough, whether or not stripped of bark or sapwood, or roughly squared
<i>4403.99.11.00-4</i>	<i>Garoowood wood in the rough, whether or not stripped of bark or sapwood, or roughly squared</i>
<i>4403.99.12.00-3</i>	<i>Sandalwood wood in the rough, whether or not stripped of bark or sapwood, or roughly squared</i>
<i>4403.99.19.00-6</i>	<i>Other non-coniferous, scented and fragrant, wood in the rough, whether or not stripped of bark or sapwood, or roughly squared</i>
4403.99.90.10-6	Malacca albizia wood in the rough, whether or not stripped of bark or sapwood, or roughly squared

4403.99.90.20-4	Maple (<i>acer spp.</i>) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.99.90.30-2	Ash (<i>fraxinus spp.</i>) wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403.99.90.90-9	Other wood in the rough non-coniferous, whether or not stripped of bark or sapwood, or roughly squared
HS code TW	items (sawn)
4407.10.10.00-7	Scented and fragrant wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6mm
4407.10.90.11-7	(<i>Chamaecyparis spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.10.90.12-6	(<i>Thuja spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.10.90.13-5	(<i>Pseudotsuga spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or finger-jointed, of a thickness exceeding 6 mm
4407.10.90.14-4	(<i>Tsuga spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.10.90.15-3	(<i>Picea spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.10.90.16-2	(<i>Araucaria & agathis spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.10.90.17-1	(<i>Pinus spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.10.90.18-0	(<i>Cunninghamia lanceolata spp.</i>) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.10.90.90-1	Other coniferous wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.24.00.00-3	Virola, Mahogany (<i>Swietenia spp.</i>), Imbuia and Balsa sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.25.00.00-2	Dark RedMeranti, Light Red Meranti and Meranti, Bakau sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.26.00.00-1	White Lauan, White Meranti, White Seraya, Yellow Meranti and Alan sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.29.00.10-6	Keruing wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.29.00.20-4	Ramin wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.29.00.30-2	Teak wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm

4407.29.00.40-0	Kapur, Jongkong, Merbau, Jelutong and Kempas wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.29.00.50-7	Okoume, obeche, sapelli, sipo, acajou d afrique, makore, iroko, tiama, mansonia, ilomba, dibetou, limba and azobe wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.29.00.90-9	Other tropical wood specified in subheading Note 1 to this Chapter, sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.91.00.00-1	Oak wood (<i>Quercus</i> spp.) sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.92.00.00-0	Beech wood (<i>Fagus</i> spp.) sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.99.11.00-0	Garewood, wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.99.12.00-9	Sandalwood, wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.99.19.00-2	Scented and fragrant, other non-coniferous wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.99.90.10-2	Maple (<i>acer</i> spp.) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.99.90.20-0	Ash (<i>fraxinus</i> spp.) wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407.99.90.90-5	Other non-coniferous wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6mm
HS code TW	HS code TW
4408.10.11.00-5	Sheets for veneering by slicing laminated wood of divisions No. 4412.13.10 or 4412.14.10
4408.10.12.00-4	Sheets for veneering by slicing laminated wood of divisions No. 4412.13.20, 4412.14.20, 4412.22.10, 4412.22.22, 4412.29.20, 4412.92.10
4408.10.13.00-3	Sheets for veneering by slicing laminated wood of division No. 4412.19.10
4408.10.14.00-2	Sheets for veneering by slicing laminated wood of division No. 4412.19.20
4408.10.15.00-1	Sheets for veneering by slicing laminated wood of divisions No. 4412.22.21, 4412.29.10
4408.10.16.00-0	Sheets for veneering by slicing laminated wood of divisions No. 4412.92.21, 4412.99.10
4408.10.17.00-9	Sheets for veneering by slicing laminated wood of divisions No. 4412.92.22, 4412.99.20

4408.10.90.00-9	Other coniferous sheets for veneering, for plywood or for other similar laminated wood and other wood, sawn lengthwise, sliced or peeled, whether or not planed, sanded, spliced or end-jointed, of a thickness not exceeding 6 mm.
4408.31.11.00-0	Sheets for veneering by slicing laminated wood of division No. 4412.13.10
4408.31.12.00-9	Sheets for veneering by slicing laminated wood of divisions No. 4412.13.20, 4412.22.10, 4412.22.22, 4412.92.10
4408.31.13.00-8	Sheets for veneering by slicing laminated wood of division No. 4412.22.21

4408.90.15.00-4	Sheets for veneering by slicing laminated wood of divisions No. 4412.22.21, 4412.29.10
4408.90.16.00-3	Sheets for veneering by slicing laminated wood of divisions No. 4412.92.21, 4412.99.10
4408.90.17.00-2	Sheets for veneering by slicing laminated wood of divisions No. 4412.92.22, 4412.99.20
4408.90.90.00-2	Other sheets for veneering, for plywood or for other similar laminated wood and other wood, sawn lengthwise, sliced or peeled, whether or not planed, sanded, spliced or end-jointed, of a thickness not exceeding 6 mm
HS code TW	items (plywood)
4412.13.10.10-5	Dark Red Meranti Light Red Meranti, White Lauan, unfinished plywood, each ply not exceeding 6 mm thickness

4412.13.10.20-3	Sipo, limba, okoume, obeche, acajou d afrique, sapelli, virola, mahogany (<i>swietenia</i> spp.) palissandre de para, palissandre de rio or palissandre de rose, unfinished plywood, each ply not exceeding 6 mm thickness
4412.13.10.90-8	Other unfinished plywood, with at least one outer ply of tropical wood specified in Note 1 to this Chapter, each ply not exceeding 6 mm thickness
4412.13.20.00-5	Processed plywood, with at least one outer ply of tropical wood specified in Subheading Note 1 to this Chapter, each ply not exceeding 6 mm thickness
4412.14.10.00-6	Other unfinished plywood, with at least one outer ply of non-coniferous wood, each ply not exceeding 6 mm thickness
4412.14.20.00-4	Other processed plywood, with at least one outer ply of non-coniferous wood, each ply not exceeding 6 mm thickness
4412.19.10.00-1	Other unfinished plywood, with both outer plies of coniferous wood, each ply not exceeding 6 mm thickness
4412.19.20.00-9	Other processed plywood, with both outer plies of coniferous wood, each ply not exceeding 6 mm thickness
4412.22.10.00-6	Veneered panels and similar laminated wood, with at least one outer ply of non-coniferous wood, with at least one ply of tropical wood specified in subheading Note 1 to this Chapter, containing at least one layer of particle board
4412.22.21.00-3	Other unfinished plywood, veneered panels and similar laminated wood, with at least one outer ply of non-coniferous wood, with at least one ply of tropical wood specified in Subheading Note 1 to this Chapter
4412.22.22.00-2	Other processed plywood, veneered panels and similar laminated wood, with at least one outer ply of non-coniferous wood, with at least one ply of tropical wood specified in Subheading Note 1 to this Chapter
4412.23.00.00-7	Other veneered panels and similar laminated wood, with at least one outer ply of non-coniferous wood, containing at least one layer of particle board
4412.29.10.00-9	Other unfinished plywood, veneered panels and similar laminated wood, with at least one outer ply of non-coniferous wood
4412.29.20.00-7	Other processed plywood, veneered panels and similar laminated wood, with at least one outer ply of non-coniferous wood
4412.92.10.00-1	Other veneered panels and similar laminated wood, with both outer plies of coniferous wood, containing at least one ply of tropical wood specified in Subheading Note 1 to this Chapter and one layer of particle board
4412.92.21.00-8	Other unfinished plywood, veneered panels and similar laminated wood, with both outer plies of coniferous wood, containing at least one ply of tropical wood specified in Subheading Note 1 to this Chapter
4412.92.22.00-7	Other processed plywood, veneered panels and similar laminated wood, with both outer plies of coniferous wood, containing at least one ply of tropical wood specified in Subheading Note 1 to this Chapter
4412.93.00.00-2	Other, veneered panels and similar laminated wood, with both outer plies of coniferous wood, containing at least one layer of particle board
4412.99.10.00-4	Other unfinished plywood, veneered panels and similar laminated wood, with both outer plies of coniferous wood
4412.99.20.00-2	Other processed plywood, veneered panels and similar laminated wood, with both outer plies of coniferous wood

Annex 10

HS code classification for timber products from EU Member States

Section IX - Wood and articles of wood; wood charcoal; cork and articles of cork; manufactures of straw, of esparto or of other plaiting materials; basketware and wickerwork

Chapter 44 - WOOD AND ARTICLES OF WOOD; WOOD CHARCOAL

Simulation date 28/02/2008

TARIC code Description

4401	Fuel wood, in logs, in billets, in twigs, in faggots or in similar forms; wood in chips or particles; sawdust and wood waste and scrap, whether or not agglomerated in logs, briquettes, pellets or similar forms
4401 10	Fuel wood, in logs, in billets, in twigs, in faggots or in similar forms
4401 21	Wood in chips or particles
4401 21	Coniferous
4401 22	Non-coniferous
4401 30	Sawdust and wood waste and scrap, whether or not agglomerated in logs, briquettes, pellets or similar forms
4401 30 10	Sawdust
4401 30 90	Other
4402	Wood charcoal (including shell or nut charcoal), whether or not agglomerated
4402 10	Of bamboo
4402 90	Other
4403	Wood in the rough, whether or not stripped of bark or sapwood, or roughly squared
4403 10	Treated with paint, stains, creosote or other preservatives
4403 20	Other, coniferous
4403 41	Other, of tropical wood specified in subheading note 1 to this chapter
4403 91	Other
4404	Hoopwood; split poles; piles, pickets and stakes of wood, pointed but not sawn lengthwise; wooden sticks, roughly trimmed but not turned, bent or otherwise worked, suitable for the manufacture of walking sticks, umbrellas, tool handles or the like; chipwood and the like
4404 10	Coniferous
4404 20	Non-coniferous
4405	Wood wool; wood flour
4406	Railway or tramway sleepers (cross-ties) of wood
4406 10	Not impregnated
4406 90	Other
4407	Wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or end-jointed, of a thickness exceeding 6 mm
4407 10	Coniferous
4407 21	Of tropical wood specified in subheading note 1 to this chapter
4407 91	Other
4408	Sheets for veneering (including those obtained by slicing laminated wood), for plywood or for similar laminated wood and other wood, sawn lengthwise, sliced or peeled, whether or not planed, sanded, spliced or end-jointed, of a thickness not exceeding 6 mm
4408 10	Coniferous
4408 10 15	Planed; sanded; end-jointed, whether or not planed or sanded
4408 10 91	Small boards for the manufacture of pencils

4408 10 93	Other of a thickness not exceeding 1 mm
4408 10 99	Other of a thickness exceeding 1 mm
4408 31	Of tropical wood specified in subheading note 1 to this chapter, dark red meranti, light red meranti and meranti bakau
4408 31 11	End-jointed, whether or not planed or sanded
4408 31 21	Other
4408 39	Other
4408 39 15	Acajou d'Afrique, limba, mahogany (<i>Swietenia spp.</i>), obeche, okoumé, palissandre de Para, palissandre de Rio, palissandre de Rose, sapelli, sipo, virola and white lauan, sanded; end-jointed, whether or not planed or sanded
4408 39 21	Planed
4408 39 31	Other
4408 39 55	Planed; sanded; end-jointed, whether or not planed or sanded-
4408 39 70	Other
4408 90	Other
4408 90 15	Planed; sanded; end-jointed, whether or not planed or sanded
4408 90 35	Other
4409	Wood (including strips and friezes for parquet flooring, not assembled) continuously shaped (tongued, grooved, rebated, chamfered, V-jointed, beaded, moulded, rounded or the like) along any of its edges, ends or faces, whether or not planed, sanded or end-jointed
4409 10	Coniferous
4409 10 11	Mouldings for frames for paintings, photographs, mirrors or similar objects
4409 10 18	Other
4409 21	Non-coniferous
4409 21	Non coniferous of bamboo
4409 29	Non coniferous - other
4409 29 10	Mouldings for frames for paintings, photographs, mirrors or similar objects
4409 29 91	Blocks, strips and friezes for parquet or wood block flooring, not assembled
4409 29 99	Other
4410	Particle board, oriented strand board (OSB) and similar board (for example, waferboard) of wood or other ligneous materials, whether or not agglomerated with resins or other organic binding substances
4410 11	Of wood
4410 12	Oriented strand board (OSB)
4410 12 10	Unworked or not further worked than sanded
4410 12 90	Other
4410 19	Other
4410 90	Other
4411	Fibreboard of wood or other ligneous materials, whether or not bonded with resins or other organic substances
4411 12	Medium density fibreboard (MDF)
4411 12	Of a thickness not exceeding 5 mm
4411 13	Of a thickness exceeding 5 mm but not exceeding 9 mm
4411 14	Of a thickness exceeding 9 mm
4411 92	Other of a density exceeding 0,8 g/cm ³
4411 93	Other of a density exceeding 0,5 g/cm ³ but not exceeding 0,8 g/cm ³

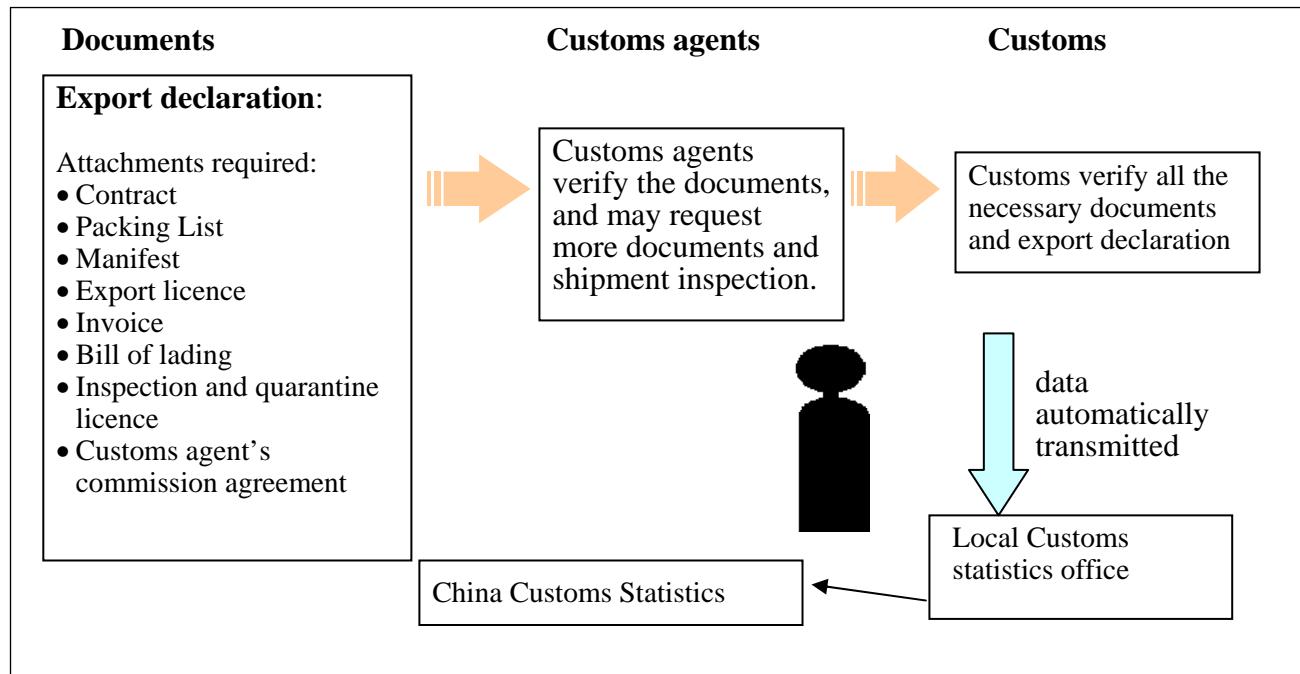

4411 94	Other of a density not exceeding 0,5 g/cm ³
4412	Plywood, veneered panels and similar laminated wood
4412 10	Of bamboo
4412 31	Other plywood consisting solely of sheets of wood (other than bamboo), each ply not exceeding 6 mm thickness with at least one outer ply of tropical wood specified in subheading note 1 to this chapter
4412 32	Other, with at least one outer ply of non-coniferous wood
4412 39	Other
4412 39 00 10	Plywood of coniferous species, without the addition of other substances, of a thickness greater than 18,5 mm when sanded, or of a thickness greater than 8,5 mm when the faces are not further prepared than the peeling process
4412 39 00 90	Other
4412 94	Blockboard, laminboard and battenboard
4412 99	Other
4412 99 30	Containing at least one layer of particle board
4412 99 70	Other
4413	Densified wood, in blocks, plates, strips or profile shapes
4414	Wooden frames for paintings, photographs, mirrors or similar objects
4414 00 10	Of tropical wood, as specified in additional note 2 to this chapter
4414 00 90	Of other wood
4415	Packing cases, boxes, crates, drums and similar packings, of wood; cable-drums of wood; pallets, box pallets and other load boards, of wood; pallet collars of wood
4415 10	Cases, boxes, crates, drums and similar packings; cable-drums
4415 10 10	Cases, boxes, crates, drums and similar packings
4415 10 90	Cable-drums
4415 20	Pallets, box pallets and other load boards; pallet collars
4415 20 20	Flat pallets; pallet collars
4415 20 90	Other
4416	Casks, barrels, vats, tubs and other coopers' products and parts thereof, of wood, including staves
4417	Tools, tool bodies, tool handles, broom or brush bodies and handles, of wood; boot or shoe lasts and trees, of wood
4418	Builders' joinery and carpentry of wood, including cellular wood panels, assembled flooring panels, shingles and shakes
4418 10	Windows, French windows and their frames
4418 10 10	Of tropical wood, as specified in additional note 2 to this chapter
4418 10 50	Coniferous
4418 10 90	Other
4418 20	Doors and their frames and thresholds
4418 20 10	Of tropical wood, as specified in additional note 2 to this chapter
4418 20 50	Coniferous
4418 20 80	Of other wood
4418 40	Shuttering for concrete constructional work
4418 50	Shingles and shakes
4418 60	Posts and beams
4418 71	Assembled flooring panels for mosaic floors
4418 72	Other, multilayer
4418 79	Other
4418 90	Other
4418 90 10	Glue-laminated timber

4418 90 80	Other
4419	Tableware and kitchenware, of wood
4419 00 10	Of tropical wood, as specified in additional note 2 to this chapter
4419 00 90	Of other wood
4420	Wood marquetry and inlaid wood; caskets and cases for jewellery or cutlery, and similar articles, of wood; statuettes and other ornaments, of wood; wooden articles of furniture not falling in Chapter 94
4420 10	Statuettes and other ornaments, of wood
4420 90	Other
4420 90 10	Wood marquetry and inlaid wood
4420 90 91	Other Of tropical wood, as specified in additional note 2 to this chapter
4420 90 99	Other
4421	Other articles of wood
4421 10	Clothes hangers
4421 90	Other
4421 90 91	Other of fibreboard

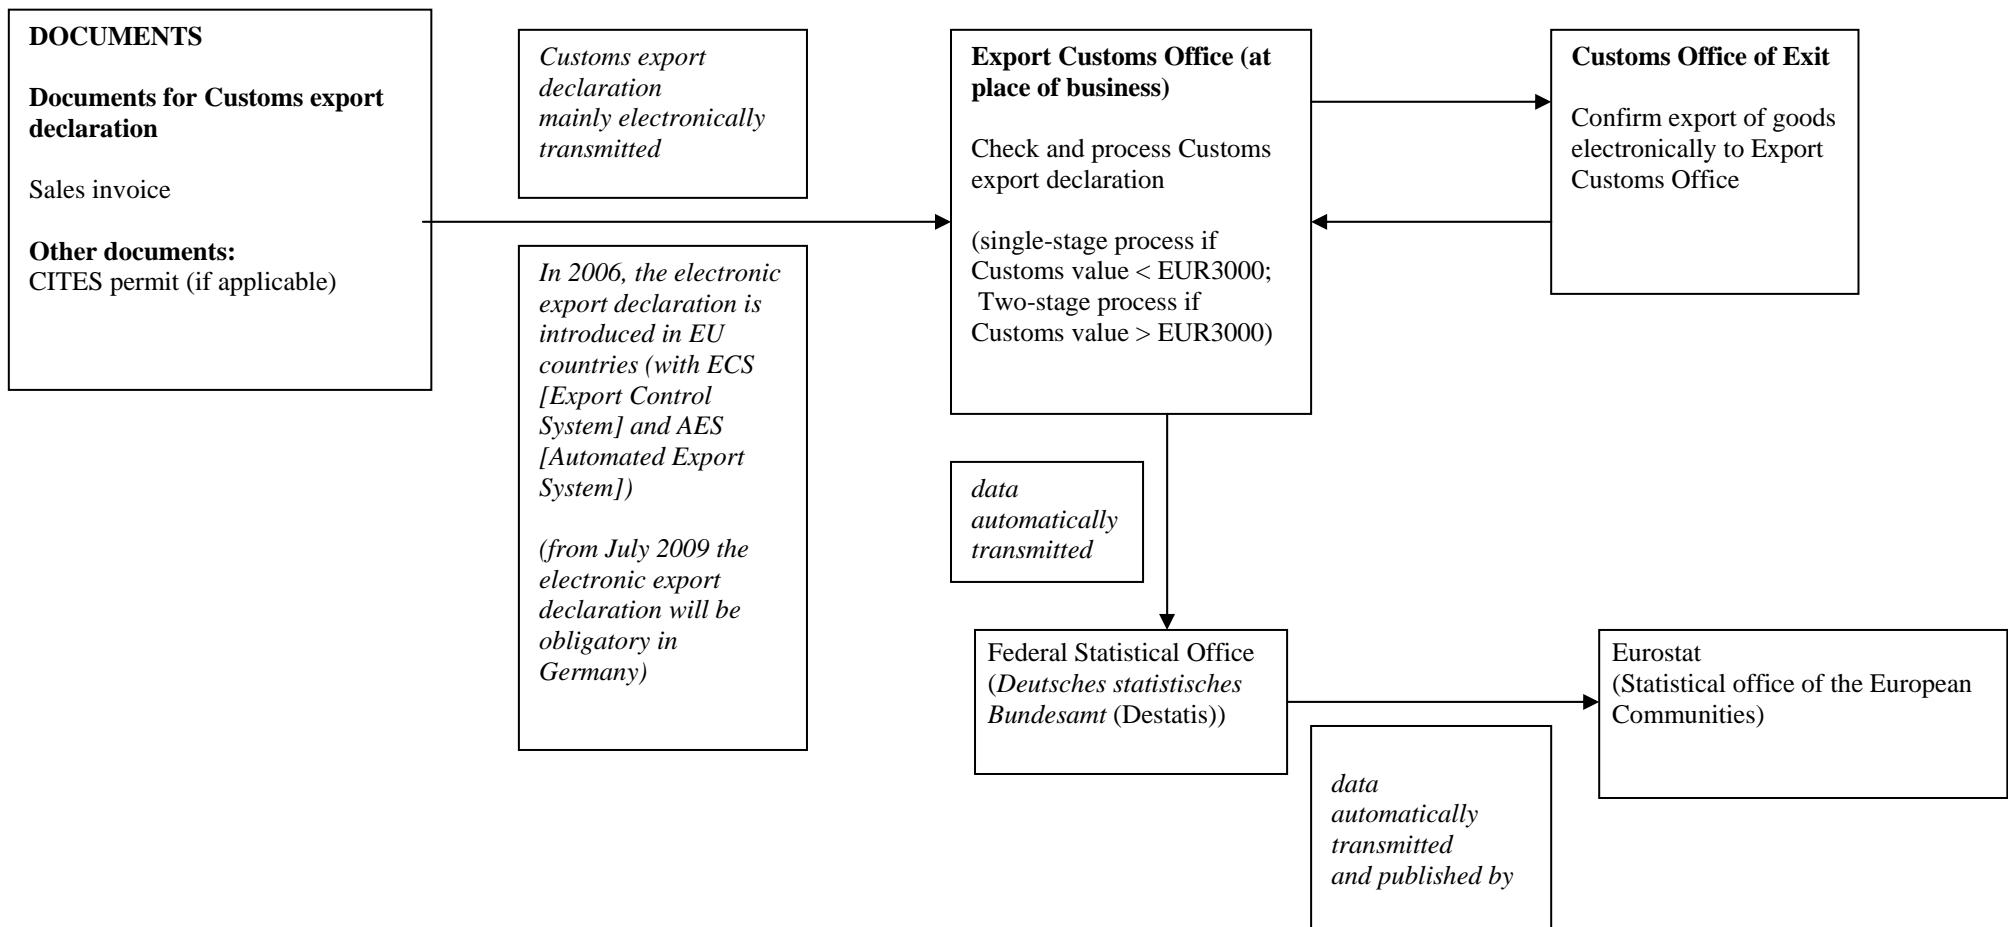

Annex II

Summaries of Customs export procedures and protocols for China, Germany, Indonesia, the UK and the USA

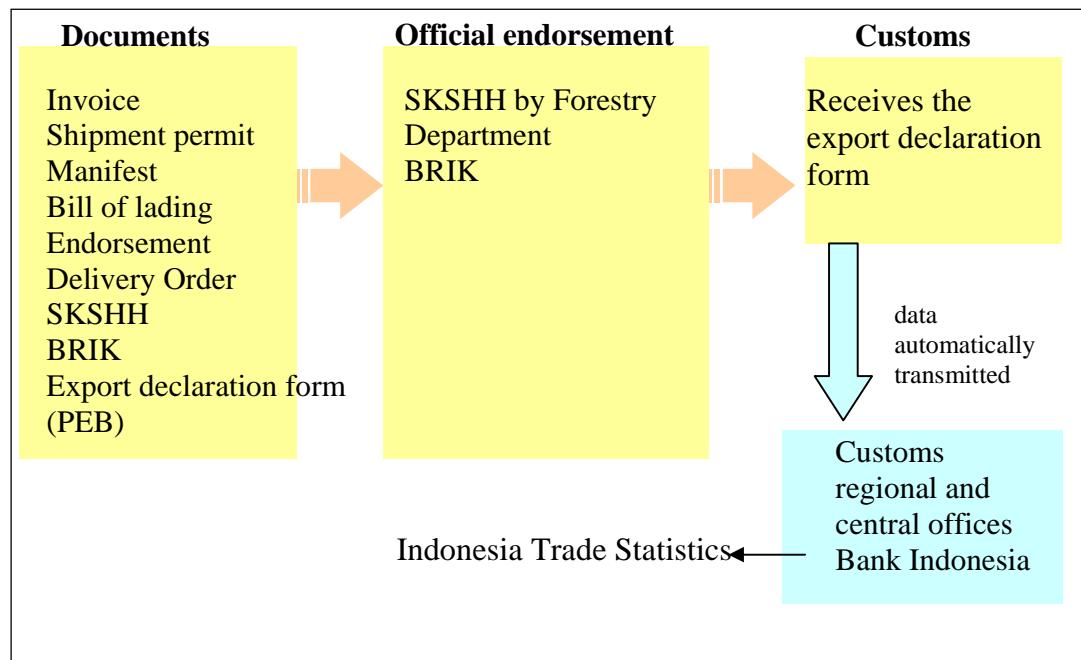

Flow chart of export documents and data flow in China

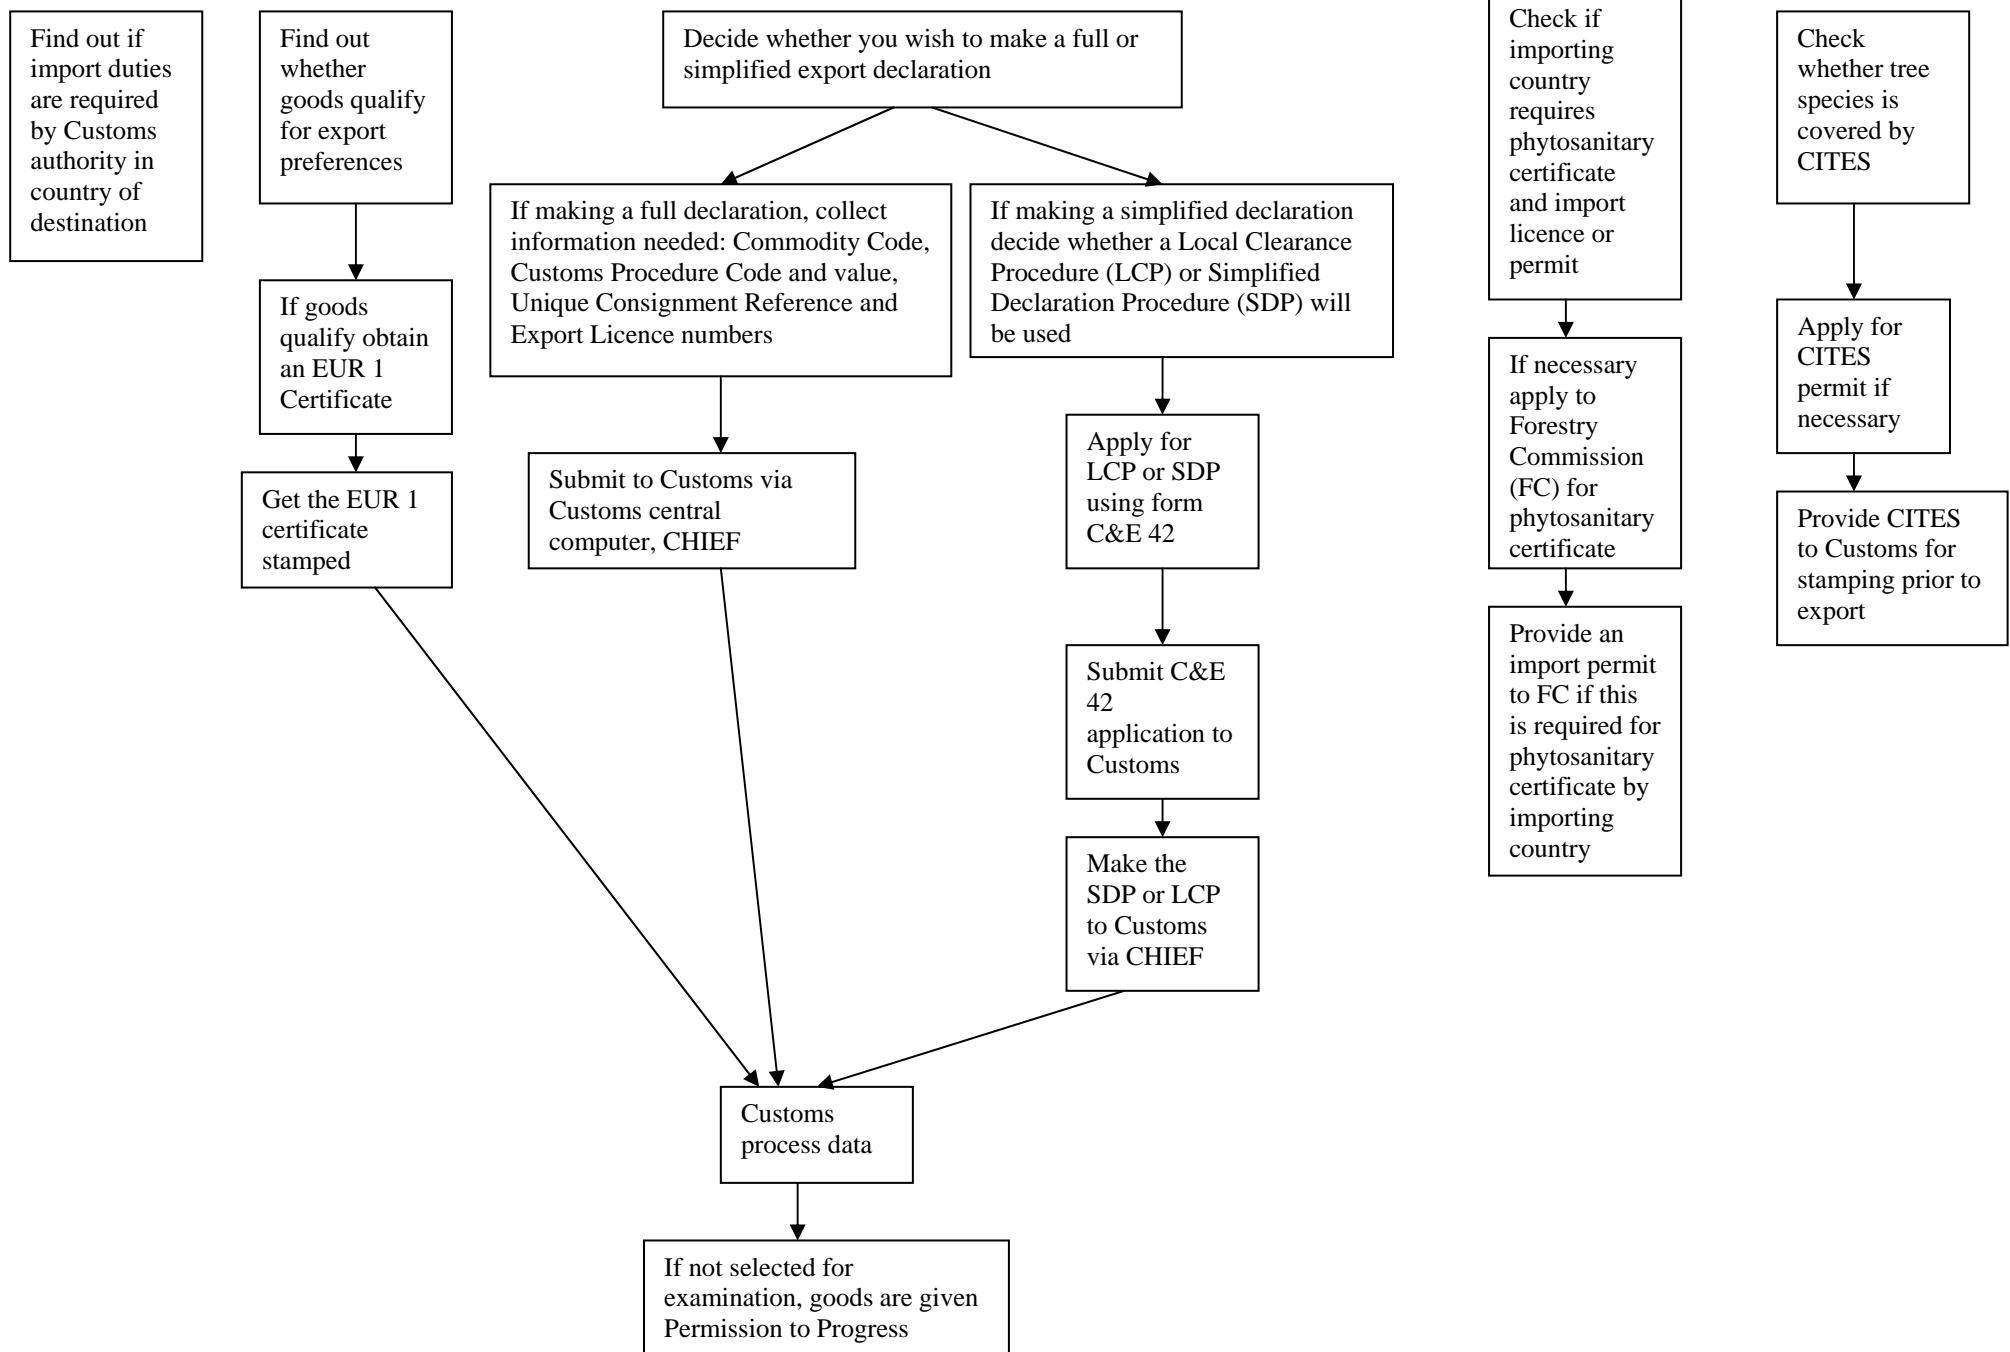

German export procedures and how statistics are derived

Indonesia export procedures and how statistics are derived

Procedures for exporting timber from the UK

US timber export requirements

This document lays down the permits and documents required from the various agencies for exporting timber and timber products from the USA. Information has been obtained online from the US Department of Agriculture, the US Fish and Wildlife Service and the US Census Bureau¹. Additionally, documents from the International Tropical Timber Organization (ITTO) were consulted particularly the report prepared for the ITTO by Seneca Creek Associates, LLC.²

The United States Department of Agriculture Animal and Plant Health Inspection Service (USDA APHIS), along with the Department of Homeland Security Customs and Border Protection, is responsible for inspection and enforcement for CITES plant shipments. The official statistics are issued by the Census Bureau of the US Department of Commerce.

CITES-listed timber species must be imported and exported through designated ports.

APHIS inspects and clears shipments for the export and re-export of both live CITES plants and dead CITES plant materials.

Statistics for exported goods transactions are compiled from three sources: Shipper's Export Declaration documents filed with Customs and Border Protection and sent to the U.S. Census Bureau, comparable data in electronic form submitted directly by exporters and their agents, and data from Canada for U.S. exports to Canada. Estimates are made for low-value exports by country of destination, and based on bilateral trade patterns.

Documents required

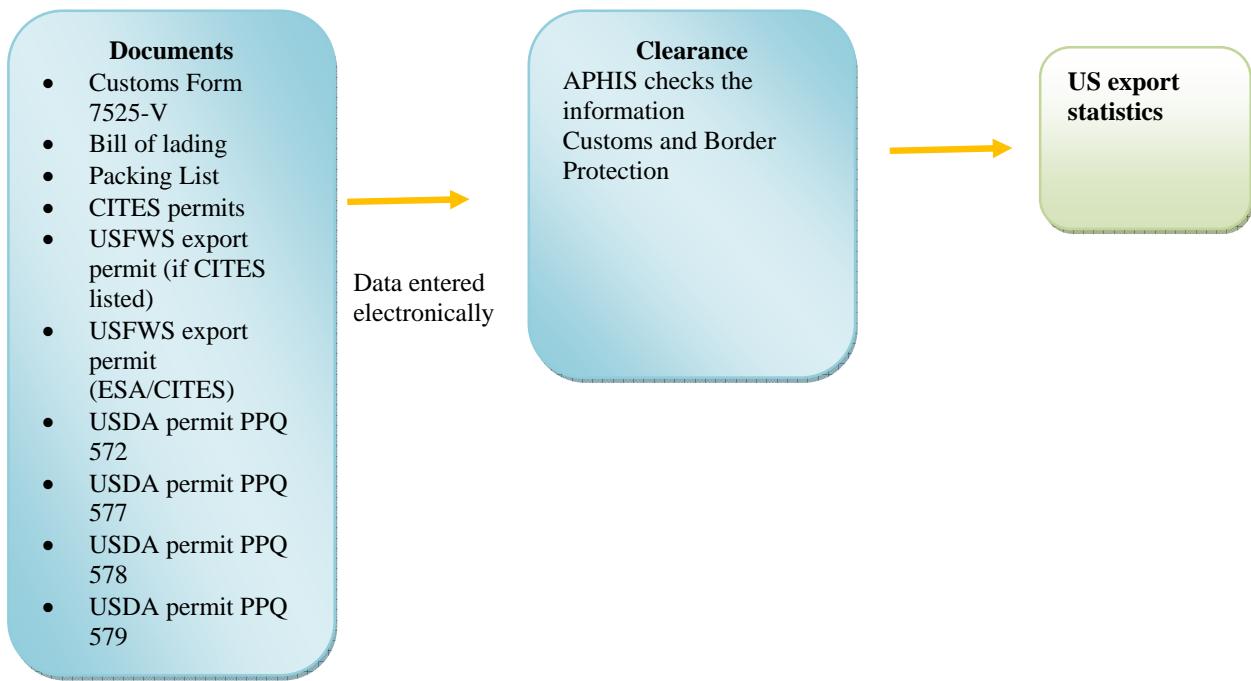

- Bill of lading
- Packing list
- Customs Form 7525-V Shipper's Export Declaration
- CITES permits
- USFWS export/re-export permit (if listed on CITES)
- USFWS export/import/interstate and foreign commerce of plants (ESA and/or CITES) permit
- USDA permit PPQ Form 572, Application for Inspection and Certification of Domestic Plant and Plant Products for Export.
- USDA permit PPQ Form 577, Phytosanitary Certificate
- USDA permit PPQ Form 578, Export Certificate
- USDA permit PPQ Form 579, Phytosanitary Certificate for Re-export

Shipments of plants and plant products transiting the USA under Customs bond are not eligible for re-export certification. Such shipments should be accompanied by a phytosanitary certificate from the country of origin if certification is required by the destination country.

US export procedures and how statistics are derived

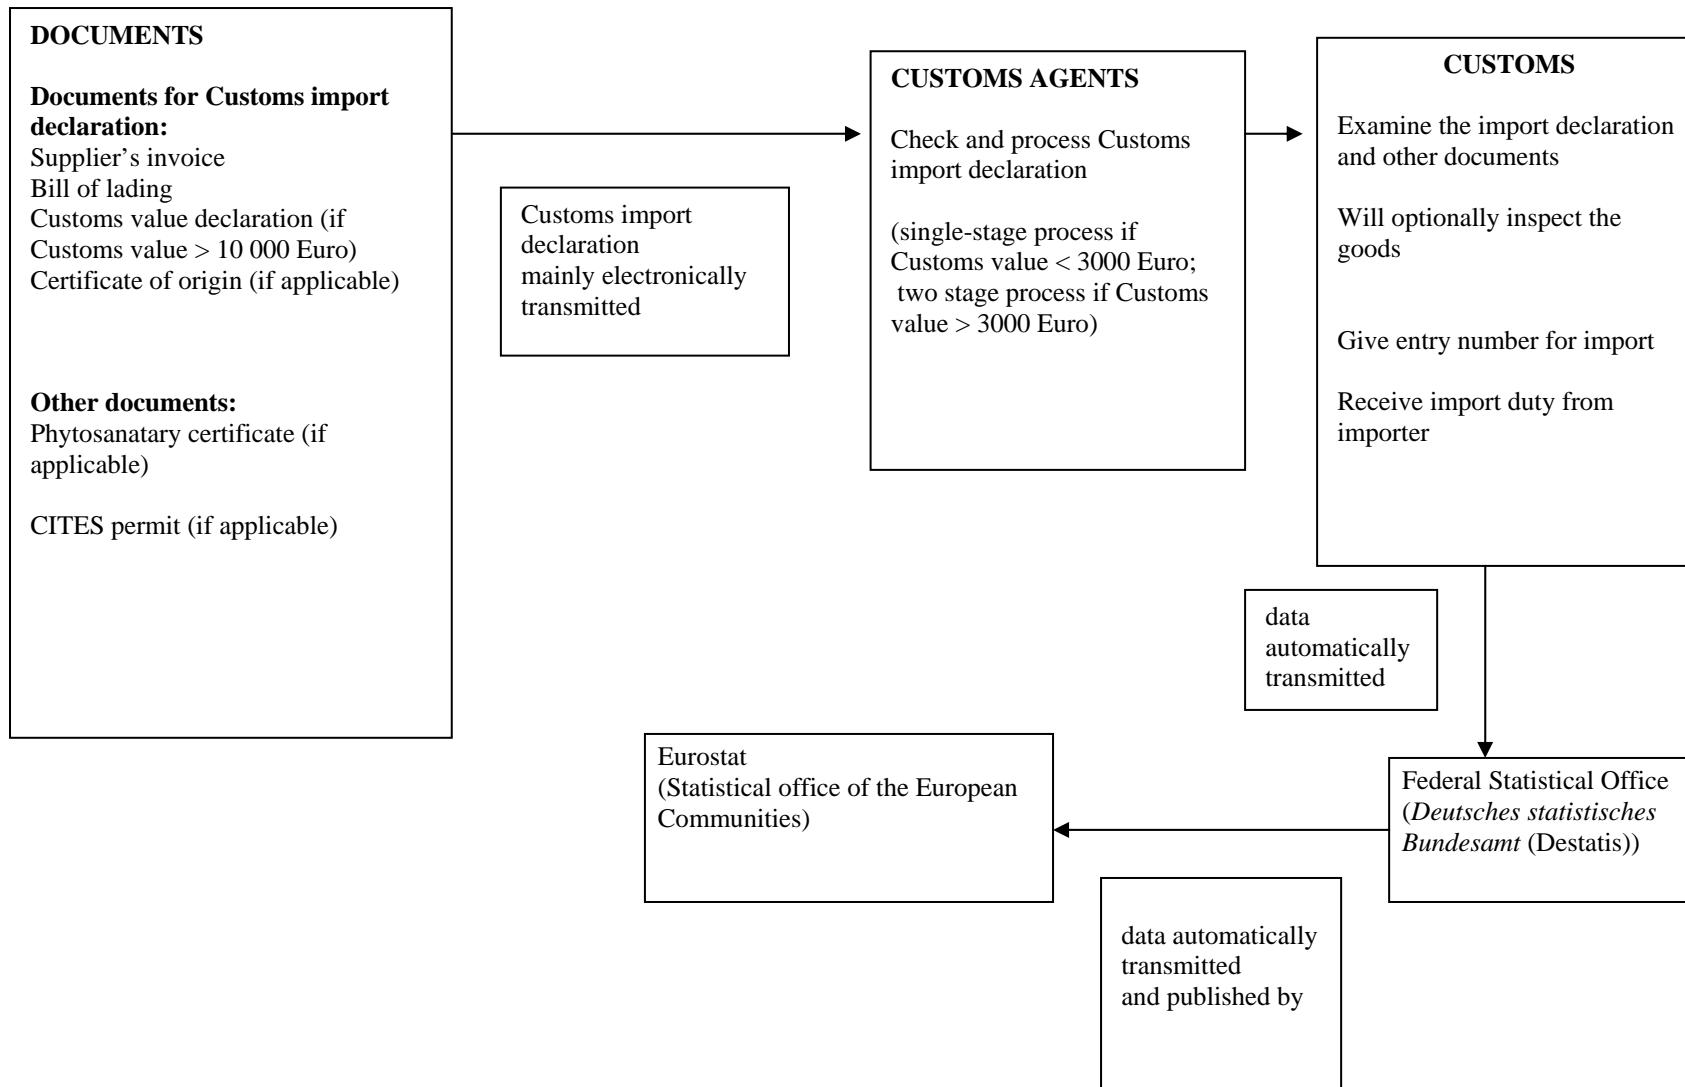

Annex 12

Summaries of Customs import procedures and protocols for China, Germany, Hong Kong, Italy, Japan, the UK and the USA

Flow chart of import documents and data flow in China

German import procedures and how statistics are derived

Procedure for lodging an import/export declaration in Hong Kong

Details of legal requirements related to import/export declaration, importers and exporters could refer to the *Import and Export (Registration) Regulations*, Chapter 60, available at <http://www.legislation.gov.hk/eng/home.htm>

Procedures and requirements:

1. Under the regulation, every person who imports or exports any article other than an exempted article is required to lodge with the Commissioner of Customs and Excise an accurate and complete import or export/re-export declaration within 14 days after importation or exportation of the article.
2. Types of Declaration: There are three different forms for importing goods, namely Form 1, Form 1A and Form 1B. The importing of timber or wood products requires Form 1, which is for imports of non-food items and articles not exempted from declaration charge. The same applies to export/re-export declaration—three different forms, namely Form 2, Form 2A and Form 2B, are used—but export/re-export of timber or wood products requires Form 2, which is for exports of Hong Kong-made non-clothing and non-footwear items and articles not exempted from declaration charge, and re-exports of articles not exempted from declaration charge.
3. Information/documents required in declaration: The data required to be declared should be in accordance with those set out in the current version of “GETS II”, details available at <http://www.gets.gov.hk>. The major items required are listed below.

Importer/ Exporter Details	Name							
	Address, Telephone and Fax No.							
	Business Registration No. / Hong Kong Identity Card							
Shipment Details	<i>For Imports</i>		<i>For Exports/ Re-exports</i>					
	Arrival Date		Consignee's Name and Address					
	Port/ Place of Loading		Departure Date					
	Exporting Countries		Port/Place of Discharge					
			Place of Final Destination if on Carriage					
			Destination Country					
Transportation Details	Transport Mode							
	Air	Ocean/River	Road	Rail	Mail	<i>Others</i>		
	Flight No.	Vessel name	Vehicle No.	Wagon No.	Post Office Receipt No.	Customs Control Point		
	Air Waybill No.- Master	Voyage No.		Rail Cargo Receipt No.				
	Air Waybill No.- House	Bill of Lading No.						
		Bill of Lading No.-House						
	Consolidation Indicator							
Commodity Details	Origin Country							
	Goods Description							
	Commodity Code							
	Quantity & Unit of Measurement							
	CIF Value HK (for Imports)							

	FOB Value HK (For Exports/Re-exports)
Packaging Details	Marks and Numbers
	Container Number
	No. and Type of Packages
	Total Number of Packages
Submission Details	Unique Declaration Reference
	Notice Reference Number

4. Import and export declarations are to be lodged with the Commissioner of Customs and Excise **electronically** via either “Direct Electronic Declaration Service” or “Paper-to-electronic Conversion Service” via Specified Agents. Information must be accurate and complete in every respect.

Dutiable commodities and declaration charge

Hong Kong is a **free port** and does not levy any Customs tariff on imports or exports. There is also no tariff quota or surcharge. There is no value added or general services taxes either. Excise duties are levied on only four types of goods (liquors, tobacco, hydrocarbon oil and methyl alcohol) and none of them are related to timber products.

The charge for declaration is minimal when compare to the trade value:

Import	Export/re-export
For non-food items - 50 cents in respect of the first HKD46 000 of the value of the goods and 25 cents in respect of each additional HKD1000 or part thereof and rounded up to the nearest 10 cents.	For exports of goods whether of Hong Kong origin or not – 50 cents in respect of the first HKD46 000 of the value of the goods and 25 cents in respect of each additional HKD1000 or part thereof and rounded up to the nearest 10 cents.

Points to note: Hong Kong is a separate Customs territory to China. Therefore, lodgement of import/export declaration for any article, other than an exempted one, imported from or exported to the mainland of China is still required.

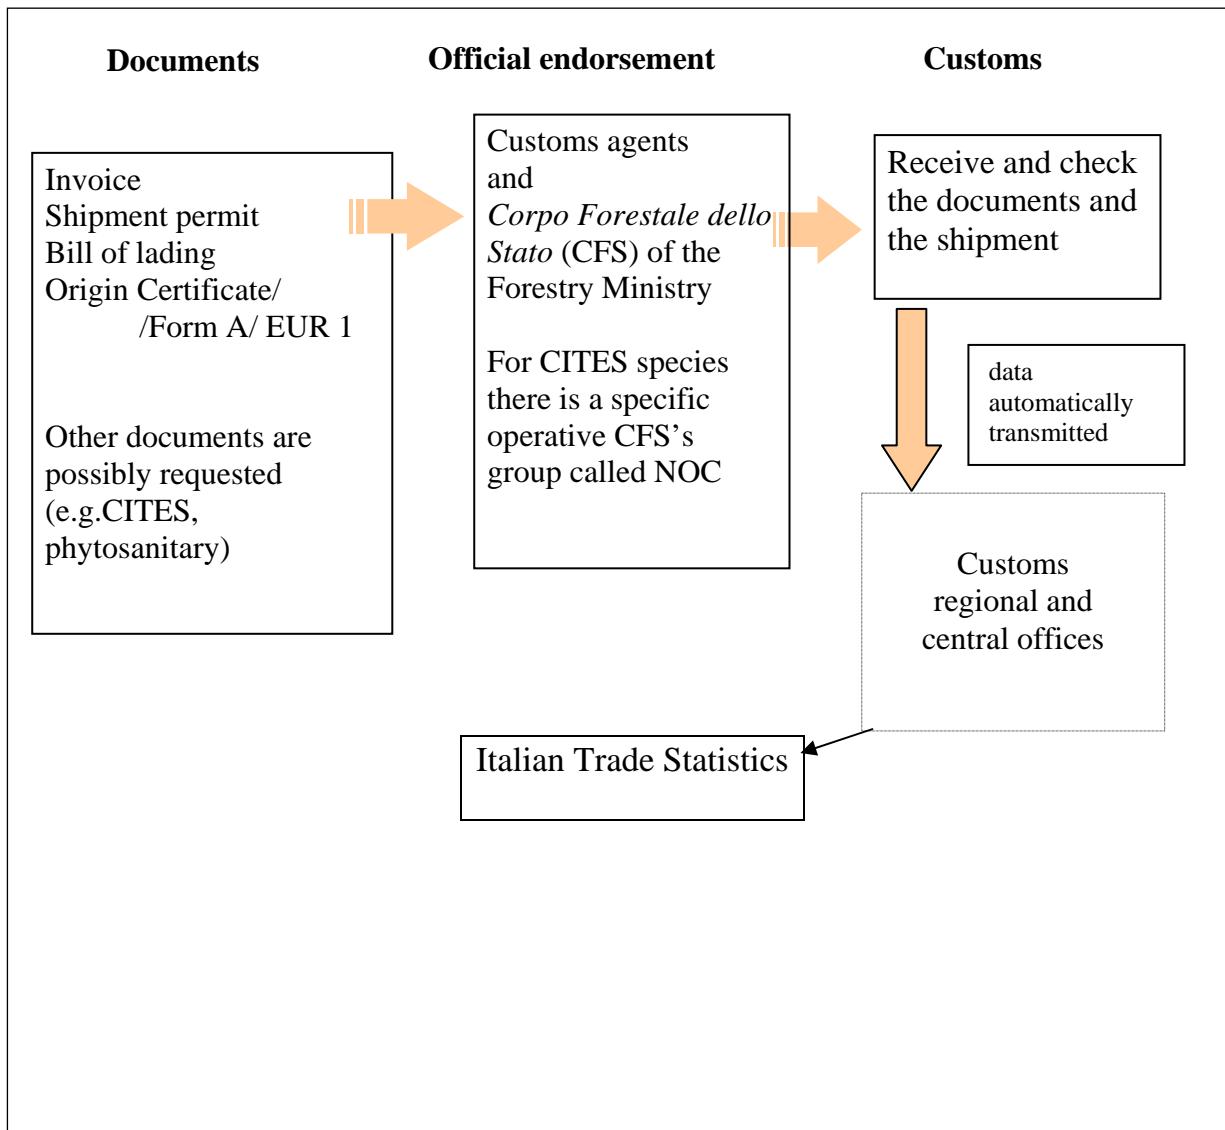

Controlled import or prohibited items

It is noted that plants are listed as a controlled import items, which is governed under the *Plant (Importation and Pest Control) Ordinance (Cap. 207, Laws of Hong Kong)*. It is illegal to import plants, plant pests or soil into Hong Kong without a valid import licence/authorization issued in advance by the Agriculture, Fisheries and Conservation Department. **However, import of timber and timber products including rattan and bamboo have been exempted from the law.** The only items prohibited from import are smokeless tobacco product, shalons, chlorofluorocarbons (CFCs), carbon tetrachloride, 1,1,1-trichloroethane and hydrobromofluorocarbons (HBFCs).

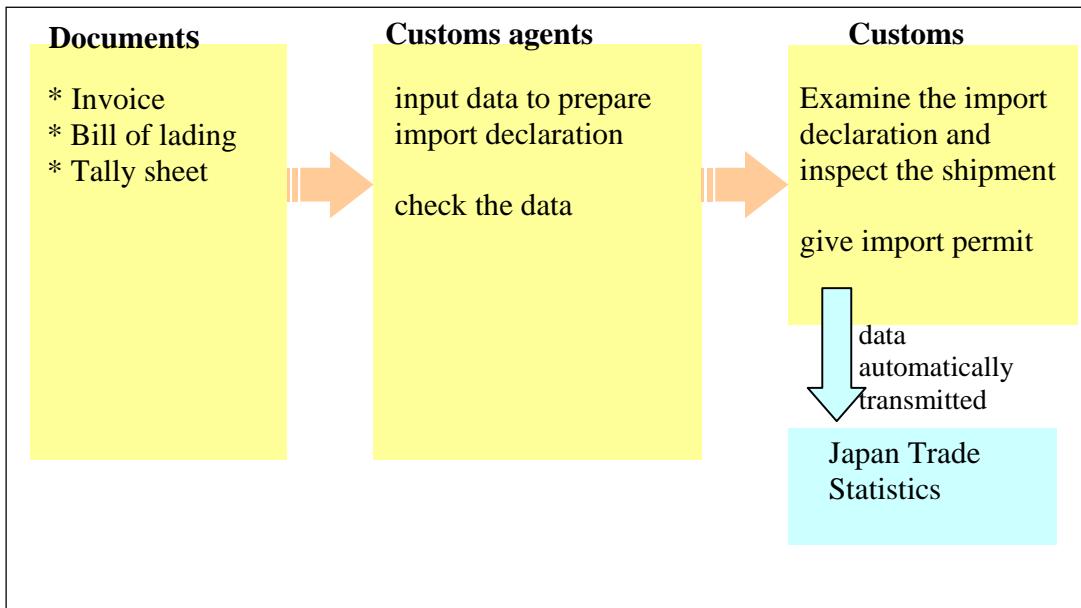

Exempted items

There are no particular items related to timber/wood products under the exempted items. Details of the exempted items could be found at www.customs.gov.hk/eng/major_declaration_statutory_e.html#annex

Japan import procedures and how statistics are derived

Procedures for importing timber into the UK

US timber import requirements

This document lays down the permits and documents required from the various agencies for importing timber and timber products from the USA. Information has been obtained online from the US Department of Agriculture, the US Fish and Wildlife Service and the US Census Bureau¹. Additionally, documents from the International Tropical Timber Organization (ITTO) were consulted particularly the report prepared for the ITTO by Seneca Creek Associates, LLC.²

The United States Department of Agriculture Animal and Plant Health Inspection Service (USDA APHIS), along with the Department of Homeland Security Customs and Border Protection, is responsible for inspection and enforcement for CITES plant shipments. The official statistics are issued by the Census Bureau of the US Department of Commerce.

CITES-listed timber species must be imported and exported through designated ports.

Customs and Border Protection inspects and clears shipments of dead CITES plant materials (i.e. timber), being imported into the USA.

Statistics for imported goods shipments are compiled from the records filed with Customs and Border Protection.

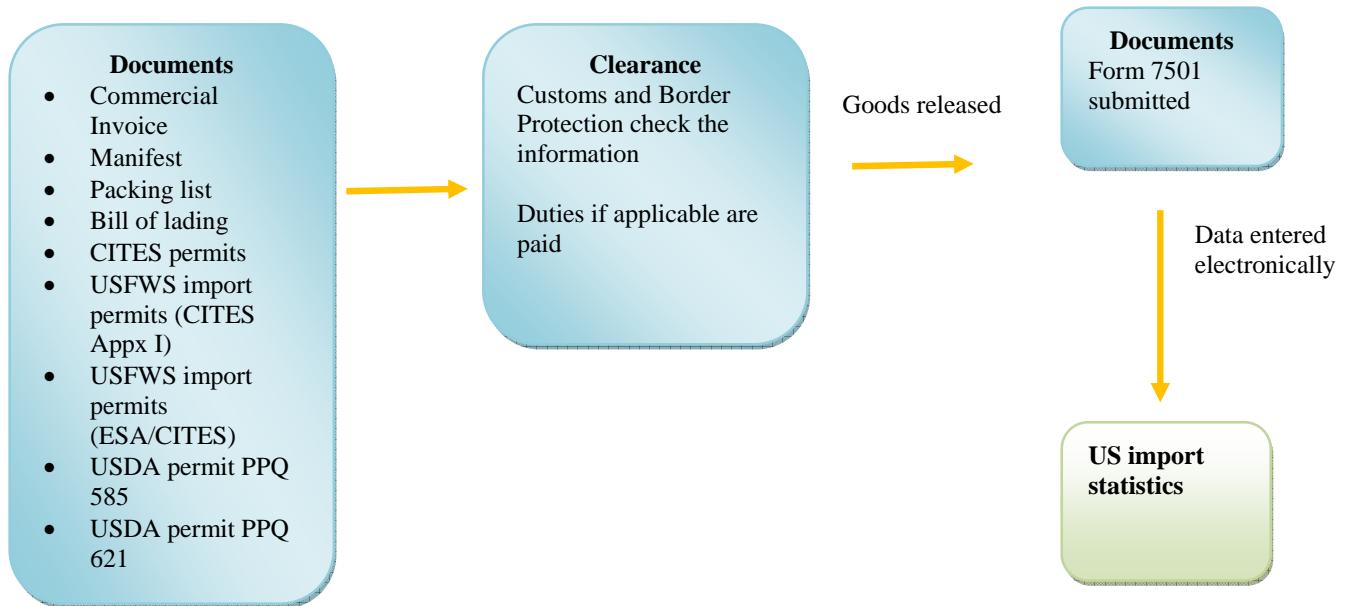

Documents required

- Commercial Invoice
- Manifest
- Packing list
- Bill of lading
- Form 7501: Entry summary – once the goods are released to the importer
- CITES permits
- USFWS import permits for wild collected CITES Appendix 1 species.
- USFWS export/import/interstate and foreign commerce of plants (ESA and/or CITES) permit
- USDA permit PPQ 585: Application for permit to import timber or timber products
- USDA permit PPQ 621: Application for protected plant permit to engage in the business of importing, exporting or re-exporting terrestrial plants or plant products that are protected. (CITES)

TRAFFIC, the wildlife trade monitoring network, works to ensure that trade in wild plants and animals is not a threat to the conservation of nature. It has offices covering most parts of the world and works in close co-operation with the Secretariat of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES).
